

Industrial Digitalization: Noux Node and KUKA Digital enter Strategic Partnership

Augsburg, April 10, 2025 – KUKA Digital, the newly established business segment of KUKA – one of the world's leading automation groups – has entered a strategic partnership with software provider Noux Node, headquartered in Finland.

Noux Node offers cutting-edge technology that enables industrial companies to leverage the best IT and DevOps practices, including version control, continuous integration, and continuous deployment of software. Additionally, it facilitates optimized utilization of local and global IT infrastructure for Artificial Intelligence- and Machine Learning-driven applications.

"We are highly impressed by how quickly KUKA Digital has leveraged our tool's added value in real customer cases. Their exceptional expertise in projects involving our technology enhances customer value and accelerates return on investment," says Ossi Talvitie, Founder and Chairman of Noux Node.

"By combining Noux Node's technology with KUKA Digital's deep expertise and extensive manufacturing experience in delivering solutions for end-to-end digitalization of production landscapes to the world's leading industrial companies, the global market can expect innovations that enhance productivity, cybersecurity requirements and optimize global software architecture", says Quirin Görz, CEO KUKA Digital.

As a software product, Noux Node extends the portfolio of KUKA Digital. The collaboration enables joint customers to collect data and distribute software packages, including security updates, in real production environments. Additionally, the collaboration's market success supports both companies in achieving their ambitious global growth targets.

NOUXNODE

Noux Node is a software company offering a Docker-based toolbox that enables industrial companies to establish an edge layer between operational network equipment and global IT infrastructure. This IT/OT integration leverages modern IT solutions, including data visualization, optimization, AI/ML engines, backup, and version management for OT devices. The world's leading industrial companies use this technology to boost productivity, enhance cybersecurity, and streamline their overall software architecture.

KUKA

KUKA is an international automation group with sales of more than EUR 4 billion and around 15,000 employees. As one of the world's leading suppliers of intelligent, resource-saving automation solutions, KUKA offers industrial robots, autonomous mobile robots (AMR) including controllers, software and cloud-based digital services as well as fully connected production systems for a wide range of industries- primarily for markets such as automotive with a focus on e-mobility & battery, electronics, metal & plastic, consumer goods, food, e-commerce, retail and healthcare. The company is headquartered in Augsburg, Germany.
