Reaping the benefits of intelligent automation. Together. Worldwide.

For over 100 years, we have been driven by the goal of making living and working easier for people. We stand for the holistic optimization of production systems. Opening up new paths and being a real “enabler” for our customers is what drives us. With our comprehensive robot portfolio, we make our customers more flexible, more productive and, last but not least, more competitive.

In addition to first-class technologies, KUKA offers comprehensive know-how in a wide range of industries. Our objective is to dive deep into our customers’ branches of industry and understand their requirements. Our aim goes far beyond the mere distribution of a first-class portfolio. We bring all our process and application expertise to bear in order to find optimal solutions. The close relationship with our customers is the basis for our work, because we firmly believe that excellence only comes when you, the customer, are our compass.

KUKA also offers a broad portfolio for the digital world. Our intelligent software solutions make industrial production increasingly transparent and efficient. With iiQKA, we are creating a new, powerful and, above all, intuitive operating system. iiQKA is also a digital ecosystem. It allows inexperienced users to benefit from the advantages of robot automation without prior knowledge. Experts become even faster and more efficient using iiQKA.
Our complete portfolio for your robot-based automation.

A tradition at KUKA: Innovation for more value creation.

KUKA is a global automation corporation with sales of around 3.3 billion euro and roughly 14,000 employees. The company is headquartered in Augsburg, Germany. As one of the world’s leading suppliers of intelligent automation solutions, KUKA offers customers everything they need from a single source: from robots and cells to fully automated systems and their networking in markets such as automotive, electronics, metal & plastic, consumer goods, e-commerce/retail and healthcare.

The company is firmly rooted in its home city of Augsburg. This is where the success story began in 1898, when Johann Josef Keller and Jakob Knappich founded an acetylene plant for lighting. The telegram abbreviation from the initial letters of the company name (“Keller und Knappich Augsburg”) became the KUKA brand name. This is where tradition meets innovation at KUKA.

KUKA has grown strongly in recent years and has developed into a global group.

As one of the world’s leading automation specialists, KUKA plays a central role in the implementation of intelligent automation. Industrie 4.0 is bringing the digital networking of production, modular and flexible manufacturing concepts, and new business models to the fore. With decades of experience in automation, process know-how and digital services, KUKA gives its customers a head start and helps them optimize value creation.
New releases

Our new releases for more freedom in automation.

LBR iisy. Robotics made easy.

With the three lightweight robots of the LBR iisy series, robotics becomes child’s play. Start-up is accomplished in less than 90 minutes without prior knowledge of robotics or programming skills. This is made possible by the ground-breaking KUKA iiQKA.OS operating system, which is being used for the first time with the LBR iisy. The LBR iisy stands for a completely new robotics experience. Programming using drag and drop functions, convenient teaching by means of hand guidance, and the ergonomic Commander or control via the KUKA smartPAD pro make robotics more intuitive than ever. The sensors allow operation without a safety fence, facilitate teaching and, if desired, safe cooperation and collaboration between humans and robots.

KR DELTA. Small footprint – large workspace.

The KR DELTA is the new parallel arm robot from KUKA. This robotic concept allows short cycle times, small installation areas and a large workspace. KR DELTA is thus the ideal solution for pick-and-place tasks of all kinds. For this purpose, the KR DELTA is mounted on the ceiling and operates in a cylindrical workspace from above. With a payload capacity of three kilograms, it is ideal for the automation of order picking and packing tasks. Until now, the KR DELTA has been available exclusively as a hygiene robot for the food and pharmaceutical sectors. It is now also available in the standard version for many other application scenarios and in particular for the secondary food industry. One particular strength of the KR DELTA lies in its low maintenance requirements. The ball joints are self-lubricating and no replacement of the lubricant in the reduction gears is required throughout the entire life cycle.

KR SCARA. Efficiency with four axes.

The robots of the KR SCARA series stand for simple and cost-effective automation. They combine speed and precision with straightforward start-up and an excellent price/performance ratio. In addition to the two previous 6 kg versions, the KR SCARA is now also available as a variant with a 12 kg payload capacity and a reach of 650, 750 or 850 mm. Two selectable spindle lengths of 400 or 600 mm further extend the range of applications. A scara robot always consists of a serial mechanical system with rotational joints in the first two axes. The other two axes are combined and enable both a rotation and a linear motion in the Z axis. The KR SCARA robots are extremely robust and feature an internally-routed media supply for air, power and data. This makes the KR SCARA an excellent solution for handling, cutting, measuring, assembly, packaging and pick-and-place tasks. In addition to the new payload models, the KR SCARA is now also available in a cleanroom variant.

KUKA.SmartBinPicking. Unsorted parts no longer pose a challenge.

KUKA.SmartBinPicking is an intelligent technology package for the automated and reliable picking of parts from a bin without colliding with the bin. The 3D camera enables the randomly arranged objects to be recognized and prioritized. This means that the software structures which part it is best to pick and thus determines the optimal sequence. While the robot is gripping a part, the next path is already being planned; thereby significantly reducing cycle times.
Hands-on robots. With intuitive interaction for new solutions.

Where humans and robots work together, completely new opportunities are created. Collaborative robots, or robots for short, can be quickly and easily integrated into production environments. Due to their intelligent sensors, they open up entirely new methods of automation and collaboration between robots and humans. Cobots are the solution for industries that, until now, have been dominated by manual labor – such as the electronics sector. They are also ideal for SMEs that have not previously automated with robots for economic reasons.

KUKA served as pioneers with the development of the world’s first cobot – the LBR iiwa – in 2014. Since then, KUKA has continuously expanded the range of possible applications for cobots. With the introduction of the LBR isy, which runs with iiQKA OS and is supported by the iiQKA Ecosystem, KUKA is now starting a new chapter. Sensors and fenceless functions facilitate teaching and, if desired, enable safe cooperation and collaboration between humans and robots. Cobots can be guided by hand during start-up and programming – enabling the robots to be taught their motion sequences much more quickly and naturally. This is so intuitive that even beginners with no prior knowledge can operate and program a cobot from KUKA.
LBR iiwa. A feel for the production world of tomorrow.

With the arrival of the LBR iiwa - one of KUKA’s lightweight cobots specializing in sensitive assembly work - safety fences make way for human-robot collaboration in the workspace.

Quick reactions. Thanks to its joint torque sensors, the LBR iiwa detects contact immediately and reduces its level of force and speed instantly. Its position and compliance control enables it to handle delicate components without creating crushing and shearing hazards.

Able to learn. Choose from three operating modes and program the LBR iiwa by means of simulation: show it the desired position – it remembers the coordinates of the point on the path. Stop for breaks and control it with simple touch commands.

Sensitive. The lightweight LBR iiwa with its high-performance servo control is able to detect contours quickly under force control. It establishes the correct installation position and mounts components quickly and with the utmost precision with an axis-specific torque accuracy of ±2 percent of the maximum torque. The LBR iiwa can also find small, delicate components in next to no time without your assistance.

Independent. The LBR iiwa’s controller, KUKA Sunrise Cabinet, simplifies the quick start-up of even complex applications. Give your operator a third hand – and have the LBR iiwa take care of unergonomic, monotonous tasks reliably and independently.

Industrial change is in full swing. IoT and Industrie 4.0 are replacing established structures with a cyber-physical production environment. The active agents in this process of change are intelligent machines with completely new capabilities: robots equipped with sensitivity and superior intelligence. Working side-by-side with humans, they operate more independently and with more sensitivity than ever before. They are mobile, highly flexible and extremely versatile. At the same time, they provide you with seamless digital networking and autonomous adjustment to the rapidly changing production requirements. KUKA is making the vision of a production environment free from rigid structures into reality. As part of this, lightweight robots (LBR) play a key role as “intelligent industrial work assistants” (iiwa). In short: LBR iiwa.

Greater freedom.
The LBR iiwa does not require a safety fence.

Cobots

LBR iisy.
The cobot for a new era.

Flexible, intuitive to use, fast to implement and safe in direct contact with human colleagues – the LBR iisy is an all-around cobot for automated production. It combines the know-how, precision and reliability of industrial automation with the intuitive flexibility of a smart device.

In order for robots to be more usable in more applications than ever before, automating tasks should be one thing above all else: simple. This is the mantra of KUKA’s new cobot running on iiQKA.OS and supported by the iiQKA Ecosystem.

Intuitive. Simple programming with smooth handguiding

Collaborative. Enables direct, fence-free collaboration with humans

Sensitive. Detects collisions and measures process forces

Flexible. Simple installation of components, fast re-use in new applications

Based on KUKA’s next generation operating system, iiQKA.OS, the LBR iisy cobot experience is user-friendly, well-thought-out and straightforward for a wide range of industries with applications that require precise, fast and sensitive activities.

With its new, user-friendly software, the LBR iisy can be operated immediately by anyone, from automation experts to cobot newcomers. This makes the robot equally at home in complex automation environments as it is in unstructured environments where it interacts with workers. And the best part: LBR iisy is ready for use in a matter of minutes, from unpacking to productive work.

LBR iisy can also work without safety fences directly with human operators and can be handguided smoothly with the commander input device on the end of the robot arm to help simplify setup and programming.

As the first robot running on iiQKA.OS, LBR iisy sets new standards for easy, straightforward and intuitive integration into production landscapes.

Flexible robot system due to easy operation and programming, as well as low weight and many pre-configured elements

Suitable for industry. Fully industrial cobot through the use of proven technologies

Product portfolio _Cobots_ 014_015
Little helpers – great help.
The versatile world of KUKA small robots.

When it comes to compact solutions and payloads of up to 10 kilograms, small robots from KUKA shine out. Our portfolio in the field of small robots impresses with a large number of variants and possible applications.

All robots in this class are characterized by impressive precision and speed and combine this with minimal space requirements.

KUKA offers an ideal solution for every automation project – from six-arm robots and robots with internal media supply to parallel-arm robots with parallel kinematic systems. Small robots from KUKA are synonymous with freedom for automation. The flexible installation positions, for example, enable the implementation of a wide variety of production cell concepts.

The breadth of KUKA’s portfolio of small robots is probably demonstrated most clearly, however, by the wide range of applications. These range from clean rooms to hygienically sensitive areas such as the food or pharmaceutical industries, and from ESD-compliant electrical assembly tasks to fields of work involving water spray or explosion hazards. Safe Robot functionalities are also already available for some small robots.
The KR DELTA impresses with speed, precision, range, reliability, versatility – and with its small footprint. This parallel arm robot was created for pick-and-place tasks focusing on short cycle times and the rapid recognition and handling of objects. With a payload capacity of three kilograms, it is ideal for the automation of order picking and packing tasks – for example in the electronics industry. One particular strength of all robots in the KR DELTA family is their low maintenance requirements. The ball joints are self-lubricating and no replacement of the lubricant in the reduction gears is required throughout the entire life cycle.

In addition to the cost-effective standard version, the KR DELTA is also available in the Hygienic Machine variant. In this hygiene robot version, the KR DELTA can also be used in demanding food or medical applications. Here, the entire body of the robot is made of stainless steel. Due to its IP 67 protection rating, it can be cleaned and sterilized with high-pressure cleaners as well as with various industrial chemicals. Both the materials used for the robot body and those used for lubrication comply with the regulations for food contact materials published by the FDA and in the LFGB.

High speed. The KR DELTA enables extremely short cycle times as fast as 0.32 seconds. Flexible flange. The flange of the KR DELTA is suitable for easy mounting of a wide variety of tools. Large workspace. The industrial robot operates reliably in a cylindrical workspace with a height of 250 Millimeters and a diameter of 1,200 millimeters. Small footprint. The ceiling-mounted robot has an installation area with a diameter of 350 Millimeters. High cost-effectiveness, low maintenance

- No replacement of the lubricant in the reduction gears is required throughout the entire life cycle.
- With an encapsulated gear unit and self-lubricating ball joints, the maintenance requirements of the KR DELTA are particularly low.
- The KR C5 micro, the latest generation of KUKA controllers, is included in the scope of supply. This requires less space and consumes little energy at only 230 volts.
- Direct cleaning with high-pressure cleaners is possible, greatly reducing cleaning-related downtime.

Powerful and easily accessible application system

- With the visualization application KUKA.VisionTech and the dedicated KUKA.PickControl software package, the seamless integration of up to ten robots and conveyor systems can be implemented with ease.
- The wide range of applications includes processing, order picking, sorting, packaging, stacking and many other applications in the electronics, food, medical, household chemical and other industries.

The HM version meets the hygiene standards according to the regulations for contact with foodstuffs

- The entire body is made of stainless steel, and is smooth, dirt-repellent and corrosion-resistant, making it easy to clean and disinfect.
- The protection rating for the robot body is IP 67, while the fourth axis meets the high protection rating IP 69K.
- The materials used for the robot body and for lubrication comply with the regulations for food contact materials published by the FDA and in the LFGB.
- Direct contact of the robot body with food and medicines is permissible. This robot variant is particularly suitable for food processing, primary packaging and similar applications.

With flexible DELTA robots – shown here in the HM variant – and matching hardware and software, KUKA offers cost-effective solutions for automated order picking and packing.
Unbeatable price/performance ratio. 6 or 12 kilogram payload, utmost precision, extremely short cycle times, high speed, low weight – and all at an affordable price.

Optimally adaptable to almost any task. Media supply in the complete package to enable fast adaptation of the robot to virtually any desired application.

Robust in many working environments. Operational in the entire temperature range from 5° to 40° Celsius, protection rating IP20.

Fast integration of peripheral equipment. Factory-prepared for the safe, quick and simple integration of peripheral equipment.

Certified quality. The KR SCARA robot is internationally certified according to the applicable EU standard.

Strong, fast, highly efficient. From the assembly of small parts to material handling or inspection – the ultra-compact KR SCARA robots immediately deliver maximum efficiency and cost-effectiveness. With integrated media supply systems, they can master almost any application straight out of the box.

The KR SCARA robots have an internally-routed media supply for air, power and data – a complete package for the smart integration of peripheral devices and the quick adaptation of the KR SCARA robot to almost any desired application. From the assembly of small parts to material handling or inspection – the 4-axis KR SCARA robots are characterized by flexible installation, highly precise motion and low maintenance requirements.

KR 4 AGILUS.
New possibilities, shaped from greater functionality.

Custom-tailored for maximum performance in production. High performance in any installation position and with minimal space requirements – the KR 4 AGILUS impresses with its compact design, long reach and high precision.

The KR 4 AGILUS combines ultra-compact, interference-free design with optimum performance: with a payload capacity of 4 kilograms and a reach of 600 millimeters, the compact robot performs a wide variety of tasks, such as handling and assembly in the electronics industry or in small automation cells. It works reliably and precisely even with the shortest cycle times.

Multi-functional applicability, flexible positioning and unbeatable reliability – the new KR 4 AGILUS pushes back the boundaries of technical feasibility in small robotics. With a payload of up to 3 kilograms, it impresses with a top cycle time as fast as 0.4 seconds*. Whether handling, continuous-path motion or working with pinpoint accuracy – the KR 4 AGILUS simplifies the automation of compact and ultra-compact cells. Flexible in installation, highly precise in motion, economical in maintenance. With just one type of robot, your applications will sustainably reach new levels of performance and efficiency. For maximum performance over the entire temperature range between 0 and 55 °C. Furthermore, the KR 4 AGILUS has an internally-routed media supply for air, power and data, enabling the quick and easy integration of peripheral devices. As a robot of the latest generation, the KR 4 AGILUS operates with the KR C5 micro, incorporating state-of-the-art control technology from KUKA. In order to solve and control tasks more efficiently and intuitively.

*Cycle time according to the "Small Adept Cycle" reference standard

**Small robots**

Utmost flexibility. Compact, interference-free design, flexible installation position and various interfaces for peripheral devices.

ESD protection. As standard, the robot is protected against uncontrolled electrostatic charging or discharging and is thus equipped for the safe handling of sensitive electronic components.

Maximum reliability. Particularly long service life and low servicing and maintenance requirements, e.g. thanks to fewer steps when exchanging cables.

Simple operation. Control via KR C5 micro and operation via the KUKA smartPAD.

Integrated energy supply system. Compatibel with most supply systems 4 × 4 compressed air 1 × M12 8-pin (24 V, 2 A) 1 × M12 8-pin Ethernet (optional)

Integrated media supply for air, power and data. For minimum disruptive contours and maximum reliability in operation.

**KR AGILUS. Custom-tailored for maximum performance in production.**

The KR AGILUS six is our compact six-axis robot designed for particularly high working speeds. Different versions, installation positions, reaches and payloads transform the small robot into a precision artist.

The KR AGILUS stands out due to its versatility that enables you to tap new fields of application. Irrespective of the installation position – whether on the floor, ceiling or wall – it achieves the utmost precision in confined spaces thanks to its integrated energy supply system and the new KR C5 micro controller. The Safe Robot functionality paves the way for innovative automation concepts. With a wide range of variants for operation in clean rooms or potentially explosive environments, or with a particularly hygienic or splash-proof design, every version of the KR AGILUS is always precise and fast.

**Hygienic Machine variant.** The KR AGILUS is available as a Hygienic Machine. The design and the materials used in this variant are absolutely hygienic. This allows it to be used in applications involving direct contact with food and pharmaceutical substances.

**Waterproof variant (IP 67).** In the Waterproof variant, the KR AGILUS is splash-proof from all sides and achieves maximum performance even in the case of extreme external circumstances. KR AGILUS variants are absolutely hygienic. This allows it to be used in even the smallest of spaces and complex applications with high cleanliness requirements.

**Cleanroom variant.** The KR AGILUS CR is suitable for use in clean rooms and meets the requirements of cleanroom class ISO 2. The KR AGILUS CR can thus be perfectly integrated into the smallest of spaces and complex applications with high cleanliness requirements.

**EX variant.** The KR AGILUS can be adapted to even the most extreme environmental conditions: with the KR AGILUS EX, we have added explosion protection to the Waterproof variant. With this design, the KR AGILUS can also work with maximum precision in potentially explosive environments (zone 2).

**Agile in every environment.** No matter how dirty, wet or sterile – the KR AGILUS achieves top performance in every production environment. A wide range of variants, such as Cleanroom, Hygienic Machine, EX – for potentially explosive environments – and Waterproof make it a specialist for many different tasks.

**Extreme precision with any cycle time.** Thanks to its robust design, the KR AGILUS achieves maximum repeatability and continuous precision. With its extreme speed, it reduces cycle times – and increases production quality, without ever getting out of step.

**Sustainably robust.** Thanks to its lifetime lubrication, the KR AGILUS never needs a change of lubricant in the gear units and has minimal maintenance requirements. The robust design ensures continuous productivity.

**Extremely compact.** Inverted on the ceiling, sideways on the wall or fixed to the floor: the KR AGILUS adapts to any installation position. We have integrated the energy supply system so that you can integrate the six-axis robot into your space-saving cell concepts.

**Protected against electrostatic charges.** Electrostatic charges are a problem especially in electronics production. The KR AGILUS has ESD protection even in its standard version. It is thus optimally protected against charging.

_Low payloads

Low payload meets maximum flexibility. A wealth of variants for a wide range of processes.

KUKA’s low payload category from 6 to 22 kilograms. KUKA robots with low payloads demonstrate unique strengths in bonding, sealing, foaming and all tasks requiring a high path accuracy. In ARC welding, KUKA robots for low payloads boast the best acceleration values on the market.

Even tasks such as component testing, small-part assembly or grinding, polishing, assembly as well as machine loading and unloading are in the best of hands when performed by KUKA robots of the low payload category. With optimal reach and payload coverage, this range of robots offers a level of performance that is hard to beat.
Surpasses limits to master every task. Regardless of the application for which you use the KR CYBERTECH nano robots, both the in-line wrist and hollow-wrist variants achieve optimal results from the outset. For reducing the maintenance costs in small, compact cells, for complex tasks or in demanding, high-density production chains. Their deployment quickly pays off. Because the new KR CYBERTECH nano series combines maximized performance with minimized investment, integration and maintenance costs.

Ready for the dynamic markets of the future. The robots of the KR CYBERTECH nano series set new standards in terms of performance and flexibility. Developed to achieve optimal results in any conceivable application. Unrivaled spectrum of capabilities: outstandingly agile, extremely fast and yet uncompromisingly precise in continuous-path motion – all combined in a single machine. With their sleek and streamlined design, the robots look good even in harsh surroundings.

Utmost precision. The industrial robots of the KR CYBERTECH nano family offer a repeatability of 0.04 millimeters. They therefore take full advantage of their strengths even at high speed.

Streamlined and compact. Maximum performance with minimal disruptive contours: the new robots are extremely compact, light and streamlined – for a wide range of applications in industrial manufacturing.

Maximum freedom. The robots open up previously inaccessible workspaces: they can cover long distances, with an extremely large workspace to the rear and a long downward reach.

ESD protection. As standard, the robot is protected against uncontrolled electrostatic charging or discharging and is thus equipped for the safe handling of sensitive electronic components.

Process-optimized motion sequences. The KR CYBERTECH nano family has optional digital plug-in Motion Modes. These are digitized motion modes that optimize the robot sequence for specific application scenarios. “Path Mode”, for example, enables high-precision continuous-path motion. “Dynamic Mode” allows a higher acceleration and velocity in order to minimize cycle times still further.

Any installation position. Install the KR CYBERTECH nano industrial robots on the floor, wall or ceiling, or at any other angle – for a wide range of different requirement profiles in any desired installation position.

Most streamlined in-line wrist. With a minimal interference radius, the KR CYBERTECH nano handling robots have one of the smallest in-line wrists in their class – worldwide. It enables work to be carried out in positions that are inaccessible for other robots.

Maximum flexibility. Simply integrate external axes via the robot controller and benefit from the innovative K-PIPE-ES energy supply concept.

The KR CYBERTECH nano in a welding application in our standard KUKA cell4_arc compact cell.

**KR CYBERTECH nano ARC.**
Extremely fast and uncompromisingly precise.

**Maximum performance with minimal costs.** The KR CYBERTECH nano ARC product family is optimized for CP applications. The industrial robots offer ideal performance combined with a high power density – for maximum economy at low cost. With their new controller structures, the industrial robots of the KR CYBERTECH nano ARC family have extremely high path accuracy and speed. The acceleration values and the new ergonomic design with minimized disruptive contours ensure continuous-path motion at the very highest level – even deep inside the workpieces. With very fine payload intervals of 6 and 8 kilograms, you will find the ideal robot model for your application.

The KR CYBERTECH nano ARC features “Path mode” as standard, which enables high-precision CP motion. It is also calibrated for positional accuracy before delivery. **Maximum precision.** With their repeatability of 0.04 millimeters, the KR CYBERTECH nano ARC robots work extremely exactly and precisely even at high speed.

**New KUKA hollow wrist.** The 50-millimeter hollow-shaft wrist is a future-oriented innovation: the hollow axis allows reduced main axis motion with short cycle times and utmost precision of movement.

**ESD protection.** As standard, the robot is protected against uncontrolled electrostatic charging or discharging and is thus equipped for the safe handling of sensitive electronic components.

**Simplified integration.** Thanks to standardized mounting surfaces, the robot is easily integrated into existing production lines and allows the uncomplicated mounting of welding equipment.

**High flexibility.** The use of modern KUKA controllers facilitates the integration of external axes.

**Maximum freedom.** The KR CYBERTECH nano ARC robots have a large workspace to the rear and a long downward reach. This enables them to open up previously inaccessible workspaces.

**Streamlined compactness.** The industrial robots are particularly light, highly streamlined and exceedingly compact. They deliver maximum performance with minimal disruptive contours.

**KR CYBERTECH nano ARC E.** In the Edition variant, the KR CYBERTECH nano ARC E marks the entry into the world of welding automation. It has been created specifically for simple welding tasks. The KR CYBERTECH nano ARC E enables very cost-effective implementation of robot-based automation for processes of low complexity. At the same time, it is uncompromising when it comes to quality, accessories or software.

**Simplified integration.** Thanks to standardized mounting surfaces, the robot is easily integrated into existing production lines and allows the uncomplicated mounting of welding equipment.

**High flexibility.** The use of modern KUKA controllers facilitates the integration of external axes.

**Maximum freedom.** The KR CYBERTECH nano ARC robots have a large workspace to the rear and a long downward reach. This enables them to open up previously inaccessible workspaces.

**KR CYBERTECH.** For space-saving cell concepts – with particularly low follow-up costs.

The specialist for handling applications. The industrial robots of the KR CYBERTECH family represent the world’s largest range of models in the low payload category with the greatest power density. They are ideally suited to space-saving cell concepts and provide top performance – with particularly low follow-up costs.

The powerful multifunction robots of the KR CYBERTECH series are specialized for handling applications: handling of large components, machining, assembling, palletizing and ARC welding. A central innovation of the KR CYBERTECH series: the industrial robots are even more compact. This enables you to benefit from the greater integration density and reduced disruptive contours. Choose the right industrial robot for every application from the wide-ranging portfolio.

Fast and accurate. The industrial robots of the KR CYBERTECH series reach exceptionally high speeds, allowing them to work even faster – without any loss of precision.

Extensive portfolio. The KR CYBERTECH series is suitable for handling large components, machining, assembly, palletizing and ARC welding.

Flexible installation. For planning security and low costs in the design of cells: the robots can be flexibly floor-, wall- or ceiling-mounted or even installed at a certain angle.

Variety of energy supply systems. Separation of the cable set and the dress package means that you can choose from a large variety of compatible energy supply systems.

Streamlined design. The KR CYBERTECH family is set apart by a streamlined wrist and an extremely compact and simultaneously athletic appearance.

Improved motion characteristics. The optimized controller structures make for smooth and sensitive motion characteristics – on the path and during positioning.

ESD protection. As standard, the robot is protected against uncontrolled electrostatic charging or discharging and is thus equipped for the safe handling of sensitive electronic components.

The technical data in the table apply exclusively to standard versions.

CR Suitable for clean rooms  F Foundry variant  HO Food compatible lubricants

The space-saving and intelligently integrated cabling ensures that the KR CYBERTECH robots have maximum freedom of motion in any installation position.
KR CYBERTECH ARC. Groundbreaking in terms of precision and ease of maintenance.

Specialized process robots for CP applications. The industrial robots from the KR CYBERTECH ARC product family are characterized by their utmost precision and top performance. The low-maintenance series ensures particularly low follow-up costs.

The industrial robots of the KR CYBERTECH ARC product family are specialized process robots for continuous-path applications such as ARC welding and the application of adhesives and sealants.

Fast and accurate. Particularly fast without compromising accuracy: the robots of the KR CYBERTECH ARC product family work even faster while maintaining the same precision.

Flexible installation. Adapt the mounting arrangement of the robots to your requirements: install them on the ceiling, floor, wall or at an angle.

Athletic design. The industrial robots of the KR CYBERTECH ARC family are highly compact in appearance but nevertheless streamlined.

Optimized motion characteristics. Thanks to optimized controller structures, the industrial robots move smoothly and sensitively both on the path and during positioning.

Broad portfolio. The KR CYBERTECH ARC product family is optimized for continuous-path applications, for example for ARC welding and the application of adhesives and sealants.

KR CYBERTECH ARC

The KR CYBERTECH ARC product family is optimized for continuous flow applications, for example for ARC welding and the application of adhesives and sealants.
Medium payload for superior performance. Variety and precision for your automation.

KUKA robots for medium payloads perform numerous demanding tasks within automation solutions. Their streamlined wrist, stiff arm design and compact mounting surfaces mean they are suitable for a wide range of applications. They work with utmost precision even when subjected to high process forces. That makes them ideal for process applications requiring path accuracy, such as milling, drilling, waterjet cutting, laser welding and other laser processing tasks. They competently handle, polish and assemble components, load and unload machines, and master complex operations such as measuring air currents in a wind tunnel. Whether installed on the ceiling or the floor, or as a shelf-mounted robot, they combine robustness, functional diversity, precision and efficient performance.
Adaptable to processes at the push of a button. Thanks to digital Motion Modes, you can adapt the performance of the robot to various processes or substeps depending on the need for higher precision or speed.

Lowest maintenance requirements. With KR IONTEC, an oil change is only required every 20,000 operating hours. The robot also has an in-line wrist design without belts.

Flexible cell and system planning. The efficient use of the work area, the low space requirement due to a small footprint and the streamlined disruptive contour enable a compact cell design.

Low inventory costs. The robot requires 50 percent fewer spare parts than its predecessor model. Spare parts availability for 25 years guarantees long-term planning reliability.

Convertible payload capacity. The payload capacity of the KR IONTEC can also be subsequently adjusted on a robot already installed – allowing for maximum flexibility in your production.

Simplified start-up. An optimized engineering tool and low training requirements using proven KUKA technology simplify start-up for you.

Optimized energy supply system. An A1 hollow shaft with a diameter of 119 millimeters ensures easy energy supply with a minimized footprint.

ESD protection. As standard, the robot is protected against uncontrolled electrostatic charging or discharging and is thus equipped for the safe handling of sensitive electronic components.

Maximum availability. The KR IONTEC has a technical availability of 99.999 percent with a mean time between failures of 400,000 hours.

---

**KR IONTEC. One robot – many applications.**

With the KR IONTEC, you are opting for pure performance and the largest work envelope in the medium payload category. Maximum dynamics and minimum cycle times.

Whether mounted on the floor, on the wall, or in an inclined position, the KR IONTEC combines a compact design with optimum use of space. Equipped with a waterproof and dustproof in-line wrist and protected motors, it is suitable for almost every area of application. A Foundry option also enables use in extremely hot environments with an extended temperature range from 0 to 55 °C.

KR IONTEC combines high output and a wide range of applications with a low total cost of acquisition, operation, and maintenance. This makes it a valuable investment in the future of your production.
High payloads with long reach. The safe choice for a wide range of production tasks.

KUKA robots for high payloads are the right choice when it comes to processes and handling tasks with a required range of up to 300 kilograms. The KR QUANTEC series impresses with a clever range of reach and payload intervals. This makes it possible to determine the optimum robot for your requirements very flexibly. As veritable workaholics, our robots for high payloads excel with innovative features such as Motion Modes and availability assurance. At the same time, they stand for efficiency and significantly low running costs.
High payloads

KR QUANTEC. The smart robot family for efficiency and a wide range of applications.

The future of your production. The KR QUANTEC robots have the largest payload/reach portfolio on the market in the high payload category. The all-rounder from KUKA is designed for applications in virtually all market segments – from the automotive industry to the foundry and medical sectors.

Optimal portfolio for maximum flexibility and low total cost of ownership. The KR QUANTEC series was developed on the basis of KUKA’s experience in the dynamic world of automation. The result: a reliable, versatile and efficient high-quality solution for your production environment. Customers benefit from the uniquely wide range of applications of the KR QUANTEC robots, which stand out for their performance, cost-effectiveness and flexibility.

An intelligent modular system ensures perfectly coordinated robots, which stand out for their performance, cost-effectiveness and flexibility.

Best in class. With the KR QUANTEC series, KUKA is presenting a robot generation whose innovative features taken together set new standards – for both conventional and digitized production worlds. The result goes way beyond technical details, also encompassing long-term aspects such as simplification of commissioning, maintenance requirements and process optimization of the system.

Sustainably low TCO. The KR QUANTEC impresses not only with its outstanding production efficiency, but also with its economical start-up and maintenance concept. With energy efficiency, top values for the mean time between failures and a reduced number of components in the complete modular system, the series sets new market standards for TCO. Features contributing to a minimization of downtimes and maintenance requirements include the innovative cabling and energy supply concept. As a result, the KR QUANTEC series excels with a significant reduction in running costs. The energy supply concept is set apart by its durability and optimal availability.

Heavy payloads

Making difficult tasks easy. Greater ease for complex processes.

KUKA robots for heavy payloads from 360 to 1,000 kilograms. Where complex work sequences with large loads are involved, KUKA robots for heavy payloads give your business decisive productivity advantages. They master the reliable handling and processing of large and heavy parts, the linking of work processes, the tending of machines, and palletizing. Special variants, such as the heat-resistant Foundry variant, optimally adapt KUKA robots for heavy payloads to your specific task. Here you can keep a cool head even in the high temperature range. The robots for heavy payloads are optimized for large and heavy tools. This means that tools with high mass inertias are no problem for these robots.
KR FORTEC. Heavy-duty robot with open kinematic system and unique payload capacity.

Versatile and flexible. The FORTEC family provides you with a wide range of products for heavy-duty tasks, including variants for a large number of applications requiring resistance to heat, dust and water. A range of mounting positions allows for even more adaptability.

Powerful and efficient. Robots of the KR FORTEC series handle large and heavy components weighing up to 600 kilograms with great precision and ease. At the same time, they require very little maintenance and are characterized by cost-efficiency as a result.

Absolute precision. The KR FORTEC combines power and technology with a pose repeatability of 0.08 millimeters – for unbeatable product quality in the heavy-duty range.

Optimum utilization of the workspace. The new generation of heavy-duty robots is made up of FORTEC robots with a more streamlined design. This compactness enables the robots to enlarge their work envelope.

The KR FORTEC is our six-axis, heavy-duty robot for intelligent system concepts. Due to its top precision and outstanding reach, this heavy-duty industrial robot is particularly suited to handling heavy assemblies.

The dynamic KR FORTEC jointed-arm robot is intended for handling heavy components. When it comes to workspace, modularity, dynamism and repeatability, this heavy-duty robot is one of a kind on the market. With the FORTEC series, KUKA has developed a flexible solution for space- and cost-saving cell concepts. Various installation positions and special variants pave the way for innovative solutions that execute heavy-duty tasks with ease in various industries, yet particularly in the automotive industry. This involves the harmonious combination of extreme strength (FORce) and the latest technology (TEChnology): FORTEC.

F Foundry variant

The technical data in the tables apply exclusively to standard versions.
**KR 1000 titan.** Our powerful robot for heavy loads.

The heaviest workpieces and components even over long distances. The KR 1000 titan is our powerful robot for heavy loads and large, heavy tools with high mass inertias.

It is the first six-axis robot with an open kinematic system and an unparalleled payload capacity. It masters the handling of heavy loads precisely and quickly, even over long distances. Engine blocks, stones, glass, steel beams, components for ships and aircraft, marble blocks, precast concrete parts – all of these heavy loads are no problem for the KR 1000 titan. For special areas of application, we offer the Foundry variant with the best payload/reach ratio or the version as a palletizing robot for heavy loads of up to 1.3 tonnes.

**High dynamic performance.** The KR 1000 titan handles the heaviest workpieces and components precisely and safely. With high speed and dynamic acceleration, it ensures optimal cycle times.

**Enormous productivity.** Thanks to the accuracy of the KR 1000 titan robot, you can improve your manufacturing quality and reduce costs. The low interference contours extend the effectively usable workspace.

**Greater flexibility.** The KR 1000 titan offers you a wide range of possible applications: as a palletizer or combined with linear axes, you increase its flexibility. It can be integrated into existing systems easily and without the need to adapt the foundations.

Palletizing robots from the market leader. When speed is of the essence.

Largest possible work envelope, minimized interference contour and maximum robustness. KUKA palletizing robots combine everything that is required for perfect automation. As the leading palletizer manufacturer, KUKA covers the payload range from 40 to 1,300 kilograms with an unparalleled variety of robots. All of our palletizing robots are specially designed for demanding palletizing and depalletizing tasks. The result is short cycle times and increased throughput combined with low space requirements and high cost-effectiveness.

Powerful. The robots from KUKA are among the fastest palletizers on the market – while also offering extreme precision and repeatability. With their streamlined, lightweight design, KUKA palletizing robots achieve greater dynamic performance, shorter cycle times and higher throughput – even in confined spaces.

Versatile. A wide range of different payload capacities, reaches and special variants ensure that our customers always find the right solution, no matter how challenging the palletizing task. All interfaces and energy supply systems are designed for versatility.

Compact. The compact and streamlined design of all robots for palletizing enables simple integration into existing systems. Their low interference contours extend the effectively usable workspace and allow innovative cell concepts.

Low maintenance. All components of KUKA palletizing robots are equipped with low-wear drive trains. Thanks to their advanced and robust design, they have extremely long maintenance intervals – with an availability of 99.995 percent and maximum energy efficiency.
**KR 40 PA.** Our smallest and lightest palletizing robot.

The KR 40 PA picks and packs your goods in record time. It can palletize products with a weight of up to 40 kilograms and reach net stacking heights of up to 1.8 meters; all in a very small space. Cycle times are shortened significantly thanks to its low weight.

**KR QUANTEC PA.** Shorter cycles, best availability and low operating costs.

The KR QUANTEC PA robots are the most powerful robots in their class. The streamlined design and low weight enable unbeatable dynamic performance and precision. The KR QUANTEC PA robots are thus perfectly suited to challenging palletizing tasks with payloads from 120 to 240 kilograms and maximum reaches – including the Arctic variant designed specially for use in cold-storage rooms. They can be used to stack multiple pallets to a great height effortlessly.

**KR 300 PA, KR 470 PA and KR 700 PA.**
High flexibility with the heavy-duty palletizers up to 700 kilograms.

KUKA palletizing robots for heavy loads can get to grips with far more. As well as their high payload capacity, combined with a reach of up to 3,150 millimeters, they stand out for their extremely high working speeds. They handle heavy payloads at high speed – with extremely long maintenance intervals. The hollow-wrist design with its extra large opening measuring an unbeatable 60 millimeters enables space-saving cell concepts.

---

**KR 1000 titan PA.**
Handling of heavy loads over long distances.

With the palletizing robots of the KR 1000 titan series, you can lift the heaviest loads with ease. The KR titan PA is the world’s first robot for payloads of up to 1,300 kilograms – with unrestricted dynamic performance and short cycle times, it is the strongest palletizing robot on the market. With their long reach and minimal disruptive contours, the strong robots of the titan series open up additional workspace.

The technical data in the table apply exclusively to standard versions.
Always there when something takes shape. For the quick linking of presses.

A long reach and a wide range of payloads – these are the strengths of the KUKA press-to-press robots. Whether they are bridging short press gaps or transferring large or medium-sized panels, thanks to their modular design and our long experience of press linking, we can optimally tailor your robot to the individual application. The robust design with low-wear components increases the service life and extends the maintenance intervals – thereby reducing your costs.
The KR QUANTEC P is the KUKA industrial robot specially designed for press linking and is the first choice for loading, unloading and linking press lines. The KR QUANTEC P has been optimized for press shop integration. It can be used to implement a wide range of applications, for press linking across narrow or wide press gaps, transferring large and medium-sized blanks as well as loading and unloading press lines. Its faster axes enable high-speed press-to-press automation, which is ideal for the automotive industry.

The KR QUANTEC press-to-press robots are available in floor and ceiling-mounted variants.

**Press-to-press robots KR QUANTEC P. First choice for linking press lines.**

**Robust with powerful gear units.** The extremely robust design with reinforced axes and highly resistant gear units ensures reliable performance and availability even under constant high stress.

**Fast with high throughput rates.** Thanks to a specially adapted drive train and machine data, the press-to-press robot shortens processing times, allowing it to achieve extremely high throughput.

**Far-reaching, both downwards and upwards.** The shelf-mounted robots have a reduced interference contour thanks to the hollow shaft in axis 1 for routing all cables. The robot knee, which is positioned lower down and further forward, enables greater downward reach.

**Space-saving at a low height.** The shelf-mounted robots from the KR QUANTEC P series make optimum use of the workspace from above. Thanks to their low height, they require very little space above the robot base, thus opening up new possibilities for space-saving cell concepts.

Anything but standard.
KUKA robots for special operating conditions.

Special operating conditions place exceptional demands on robotics. We at KUKA are familiar with these challenges and offer a wide range of solutions that allow efficient robot automation even under extreme conditions.

The spectrum of special variants ranges from use in particularly cold or hot environments, through solutions for the food or hygiene sector, to robots that are suitable for clean rooms, potentially explosive or even humid environments.

All special variants have highly specialized features in addition to our KUKA quality promise of precision, flexibility or process reliability.

HQ  Food compatible lubricants
WP  Splash-proof
EX  For potentially explosive atmospheres
CR  Suitable for clean rooms
HM  Hygienic Design
A   Arctic version down to -30°C
HO robots. Safe handling of food: Uncompromisingly hygienic, safe and efficient.

Robotic automation has become indispensable in the food industry. Robots play an important role when it comes to palletizing, repackaging or food handling – such as sorting, transferring or packaging. The KUKA HO portfolio is the largest of its kind, thus expanding the range of applications in the food sector, where automation plays an ever-increasing role and where the need for flexible solutions is great. With our HO robots we only use NSF H1 lubricants, which are food compatible. Concerning cleanability KUKA HO robots are also the perfect solution, and of course, they can be equipped with all standard software and hardware options.

Especially in microelectronics, the pharmaceutical industry, microsystem production, the optics industry as well as medical technology it is the primary objective to prevent the contamination of products and processes. KUKA has developed three types of robots that can be used in clean rooms – KR AGILUS CR, KR CYBERTECH CR and LBR iiwa CR. All our cleanroom robots comply with cleanroom class 2 of DIN EN ISO 14644-1, the second highest of eight cleanroom classes. Due to a special powder coating, the cleanroom robots have extremely smooth surfaces. Air-bonded particles can, thus, be avoided, and special seals stop dust and seal abrasion to escape from the robots. CR robots meet the strict cleanroom criteria of the Fraunhofer Institute.
WP robots. Due to its waterproof design, the KR AGILUS WP is suitable for permanent use in working environments with splashing water. One example is the inside of machine tools. The WP robot meets the requirements of protection class IP 67 and is, therefore, even protected against temporary immersion in water. This is made possible by additional seals, constant surface treatment and the use of plastic covers instead of stainless steel covers.

EX robots. Wherever an explosive atmosphere can occur – for example in paint shops or in the chemical industry – the KR AGILUS EX is a reliable contribution to secondary explosion protection. To achieve this, the robot is not only sealed (it meets protection rating IP 67), but can also be pressurized. This overpressure ensures that gases and dusts cannot intrude and, therefore, ignite. For monitoring the pressure the robot can be upgraded with an optional detection unit.

HM robots. Hygiene begins with design. The robots of the Hygienic Machine class (KR AGILUS HM and KR DELTA HM) are technically designed in such a way that dirt cannot settle. In particular, the electrical interface, which is difficult to clean, is not located in the primary contact area, but underneath the robots. In addition, all surfaces are corrosion-resistant. Cleaning is carried out with commercial detergents and can also be performed at high pressure. This means that HM robots can be safely used in direct contact with food and pharmaceutical substances.

A robots. Robots that work reliably in extremely cold temperatures are in demand in the food sector. With the KR QUANTEC PA Arctic, KUKA has designed a robot that will handle tasks with large ranges and short cycle times even at minus 30°C (-22°Fahrenheit) without a protective cover. Despite deep-freeze conditions, the mechanical systems do not need to be extra heated. The large operational range is not limited by additional insulation.
Our Foundry robots and machines are all-rounders in the world of the foundry and forging industry.

Robots need to meet a number of requirements for the new, innovative casting processes: a surface that is resistant to heat, corrosion, alkalis and acid is essential, as are special seals on the motor and gear unit flanges. The Foundry wrists of the KUKA robots hold gripper tooling made of heat-resistant special steel and are provided with a special paint finish. This makes even higher heat resistance possible in this especially critical area. The robot wrist and in-line wrist are provided with redundant safety through sealing air and high-quality Viton seals with thermal and chemical resistance.

Wide product range. KUKA foundry robots for payloads from 20 to 1,300 kilograms can do almost anything.
KR CYBERTECH

The Foundry robot from our proven KR CYBERTECH family.

KR IONTEC

The KR IONTEC combines compact design with the largest working envelope in its class for optimum use of space with a small footprint. Equipped with a waterproof and dustproof in-line wrist and protected motors, the robot is suitable for almost every area of application. A Foundry option also enables use in extremely hot environments with an expanded temperature range from 0 to 55 °C.

KR 1000 titan

The KR 1000 titan F series – with a payload of up to 1,300 kg and a long reach – enables the precise handling of XL workpieces such as large engine blocks.
KR FORTEC is the perfect choice for handling heavy parts. With an unparalleled range of models for payloads up to 600 kilograms.

## Specifications

- **Reach**: KR FORTEC - 2,826 – 3,326 mm, KR QUANTEC - 2,701 – 3,505 mm
- **Payload**: KR FORTEC - 240 – 600 kg, KR QUANTEC - 120 – 300 kg
- **Controller**: KR C5, KR C4
- **Variants**: F (Foundry variant)
Fast trimming presses from KUKA. The energy-efficient solution for precise forming and deburring.

With the development of a new press series, a modern controller generation with touch display and a drive concept with servomotors, KUKA has the optimal solution to meet increasing demands in production.

The Reis Robotics press series offers you more than 30 different pillar press models. You thus benefit from optimal solutions with many advantages - for both manual and automatic operation:

- Outstanding precision, speed and durability
- Low-backlash pillar guides and bend-proof press frames ensure precise cutting
- Trimming and machining at different levels in one clamping set-up ensures high cost-effectiveness and profitability
- New DIALOG IV controller generation with intuitive touch control enables the fast creation, modification, waving and replication of tool-specific programs
- Newly developed servo-hydraulics of the trim press reduce the energy requirements by up to 60 percent (customer- and workpiece-specific)

KUKA sliding/tilting trim presses systematically assure quality and performance: the presses ensure process-reliable automation and offer a high degree of flexibility in casting cell configuration.

The press series includes various different models, offering optimal solutions and many advantages for your automation:

- Optimal setup with minimal effort
- Modular, flexible system for a wide range of casting cell configurations
- Process-reliable disposal of trimmed material and cleaning of tools
- Complete accessory range for additional operations on the cast part
- High stability and short cycle time due to low installation height and small strokes
- Manual operation possible for temporary emergency operation

New Dialog IV controller. As with the fast trimming presses, the controller of the sliding/tilting trim presses is adapted to the latest DIV controller generation. This allows all familiar functions to be used, including:

- Parallel motion of up to five actuators simultaneously
- Tool configurator facilitates programming of the sequence
- Programmable homing run
- User management
- Comprehensive diagnostic options

Optionally available

- Logbook function (traceable modifications)
- Integration of cell visualization
- Remote box for remote maintenance
- Pressure-free decoupling of the trimming tools
The KUKA die-casting cell is operational in next to no time thanks to perfectly coordinated components, defined interfaces and tried-and-tested processes. Available in a wide range of variants that can be freely combined, the casting cell can be adapted flexibly to all tasks in the field of die-casting – from unloading the die-casting machine to cooling and deburring the workpieces.

The fully automatic die-casting cell can be optimally integrated. KUKA experts provide you with support throughout the entire process – from planning through to servicing.

**Die-casting cell KUKA cell4_die-casting.** Utmost efficiency at every step.

To meet the increasing demands and energy costs in production, KUKA has developed the immersion cooling basin series. The service-proven quality remains unchanged, and is refined and optimized on a continuous basis.

**Immersion cooling basin from KUKA.** Cooling capacity up, energy costs down.

In the “autonomous” immersion cooling basin, thermal plates dissipate the thermal energy collected in the basin. These water-water heat exchangers are connected directly to the foundry’s cooling circuit. They are operated without electrical connections or additional media. If a higher cooling capacity is required, “conventional” immersion cooling basins with a separate heat exchanger can still be used.

The KUKA die-casting cell is operational in next to no time thanks to perfectly coordinated components, defined interfaces and tried-and-tested processes. Available in a wide range of variants that can be freely combined, the casting cell can be adapted flexibly to all tasks in the field of die-casting – from unloading the die-casting machine to cooling and deburring the workpieces.

The fully automatic die-casting cell can be optimally integrated. KUKA experts provide you with support throughout the entire process – from planning through to servicing.

Gravity die casting machines from KUKA.
Synchronized motions for the perfect cast.

The innovative drive, operating and control concept of the gravity die casting machines from KUKA provides you with the ideal prerequisites for optimal casting quality.

**Gravity die casting: the process.** The gravity die casting machines fulfill their purpose efficiently and are easy to handle. Depending on your individual requirements, the core is automatically or manually placed into the permanent mold. When the permanent mold is closed, the casting process is carried out. For this, the swivel motion is executed by means of a servo drive.

**Synchronized filling process of the gravity die casting machine.** The special feature: here, the pouring motion of the robot is perfectly coordinated with the tilting motion of the gravity die casting machine. This allows the component to be poured evenly from the bottom to the top and ensures an optimal and precise filling process.

**Advantages of gravity die casting.** The gravity die casting machines are available in a range of variants and also as single and double tilt casting machines. All of the versions excel with the same advantages and can be used flexibly and effectively in your production system:

- Robust and low-torsion mechanical construction
- Innovative, low backlash drive concept
- Positionally accurate thanks to servo drive
- Also suitable for linear casting cells and casting carousels
- Interface for fluids supply available (for example, gas or cooling system)

**Intuitive programming and control of gravity die casting.** The gravity die casting machine is controlled by means of an app, thus offering extremely user-friendly and intuitive handling:

- Features its own casting machine controller that can be programmed via the TIA Portal
- Freely programmable pouring curve and tilting speed
- Freely adjustable heating and cooling circuits
- Touch control
- Recipe management

Holistic automation concepts for gravity die casting are a major focus with the extensive product range of robots, software tools, casting carousels, casting machines and the required peripheral equipment.
KUKA cell4_premachining. Compact robotic cell for cost-effective finishing.

Compact and modular robotic cell for cost-effective finishing operations such as deburring, sawing, milling, or fettling and grinding on various components and materials.

Whether as a deburring, milling or grinding cell: The KUKA cell4_premachining manufacturing cell combines performance and quality with maximum flexibility and ease of operation. The standard cell can be customized with versatile, modular packages and automation options to create custom-tailored solutions in the field of deburring technology.

The cells are transportable thanks to forklift-compatible base frames and can thus be quickly relocated and integrated into existing production systems.

Extremely cost-effective. Uniform standards for a perfectly coordinated and global production landscape and sustainably reduced service costs

Powerful motor spindle. Compact motor spindle for easy control of machining parameters thanks to direct integration in the robot controller

Ideal machining position. Rotary module for optimum alignment of the workpieces relative to the machining tool and stable, reproducible position thanks to stiff robot kinematic system

Powerful machining robot. All moving axis lengths highly compact for low torque loads in the bearings

Spotting presses from KUKA. Efficiency and quality for die making.

KUKA spotting presses lay the permanent foundation for utmost quality and precision. Die makers who test their products in a press achieve high product quality and prevent production loss and stoppages at their customers’ sites.

Quality and precision in die making. Spotting is one of the quality assurance tasks in die making. It helps to deliver the best possible products that have a long service life and enable you to achieve zero-defect output in everyday production. Even in the case of very large dies, fractions of Millimeters determine whether a die seals when closing.

The spotting presses contribute to better end products and save users from time-consuming and cost-intensive trial runs in the production environment.

Advantages of the spotting press. The key feature of the spotting presses is the even force distribution on the plunger. This is made possible thanks to cast and ribbed box sections and clamping plates. Compared to welded steel profiles, these transmit the forces with extremely little distortion and top precision. What is more, the spotting presses offer many additional advantages:

- User-friendly operation by means of stepless joystick control for pressure and speed
- Intelligent control technology prevents operator errors
- Plain text display with understandable feedback regarding the system status
- The option of swinging out the upper half of the die by 180° supports ergonomic work
- Large clearance between columns allows for large dies
- Clamping of oversized dies possible
- Horizontal positioning accuracy of the carriage plate: 0.04 mm
- Plane parallelism of both clamping plates within ±0.1 mm per 1,000 mm

Choose the appropriate accessories:
- 90° pivoting
- 180° pivoting
- Press force increase
- Tilt table ±60°
- Rotary unit
- Positioning control
- Positioning control with die and machine protection
- Speed increase
- Ejector
- Control device for hydraulic core pullers

Robots in the medical industry

KUKA Medical Robotics. A head start in medical experience.

From diagnostics to surgery to therapy, KUKA robots meet the high demands of the medtech industry and are suitable for a wide range of medical applications. With our LBR Med, we are taking the idea of cobots one step further. With the help of our partners, we turn human-robot interaction into a robot-based assistance system that supports medical personnel in a wide variety of interventions.

The LBR Med is the first robotic component in the world to be certified for integration into medical devices. Our robotic technology is used in a wide range of medical fields, such as orthopaedic, minimally invasive and aesthetic surgery, radiotherapy, rehabilitation applications and in various diagnostic procedures such as angiography.
LBR Med. Your partner in the medical sector.

The LBR Med bundles all the robotic capabilities that are specifically required in medical technology.

With the LBR Med, KUKA supplies a robotic component for integration into a medical device.

Certification according to the "IECEE CB Scheme". The certification was achieved according to the internationally established "IECEE CB Scheme" – a procedure that certifies conformity to certain safety and quality standards. In order to receive the CB test certificate, the LBR Med lightweight robot must meet medical requirements and comply with the international standards IEC 60601-1:2016 and IEC 62304:2006 (First Edition) + A1:2015. These include extensive testing of the hardware and software of the two 7- and 14-kilogram payload variants of the lightweight robot. On the one hand, compliance with the safety requirements for medical electric devices stipulated in the international standards was assessed. On the other, the processes in the life cycle of medical software development were also verified and approved. In both cases, the inspection was carried out by an accredited certified body.

Precise
The LBR Med requires no additional devices for calibration or highly precise work. Thanks to its integrated mastering sensors, it calibrates itself fully autonomously and achieves an outstanding repeatability from ±0.1 mm to ±0.15 mm.

Safe
The LBR Med sets standards with its safety structures. Its safety-rated hardware and software processes the relevant data. Functions covered by the equipment include encoder signals, force/torque sensors, safety circuit, single fault safety, safety-rated interfaces and configurable safety events – in short: everything that predestines it for medical technology.

Sensitive
The LBR Med has redundant, integrated torque sensors. It can detect forces applied externally and react according to the freely programmable system responses you have specified. Benefit from its haptic capabilities for manual guidance, teleoperation with haptic support or gravity compensation. Use the LBR Med to apply predefined forces during a motion or as a compliant robot that responds adaptively to process forces. Furthermore, the integrated sensors are also used for safe collision detection, thereby enabling human robot collaboration (HRC).

The new generation of KUKA software Sunrise.OS Med 2.6 for the LBR Med. The Java-based software generation for the LBR Med – Sunrise.OS Med 2.6 – meets the requirements of IEC 62304:2006 (First Edition) + A1:2015. The system software offers all functions needed for programming and configuring medical robot applications. Object-oriented programming enables fast commissioning and, based on Java 8 and Windows 10, access to high-end robotics. Thereby, the software additionally offers a user-friendly program editor with many powerful option packages such as: KUKA Sunrise.FRI Med / KUKA Sunrise.Servoing Med / KUKA Sunrise.PreciseHandling / KUKA Sunrise.IncreasedStiffness / KUKA Sunrise.BrakeHandling

Media flange inside electrical Med. Connections for power supply, I/Os or EtherNet are available for customer-specific tools on the flange via the media flange inside electrical Med.

KR QUANTEC HC. The safest one in the family.

A strong partner in many fields.

The KR QUANTEC HC is based on the KR 300 R2700-2. A trade-mark feature is the high and versatile payload of up to 300 kg, which predestines the robot for use in almost all areas. In addition, the KR QUANTEC HC has a reach of up to 2,700 mm and additional brakes in the axes, which ensure even greater safety. The KR QUANTEC HC comes with a counterbalancing system and a pressure sensor, which allows the pressure to be checked during use and the robot to be stopped if the pressure drops. Thanks to the person rescue system, the brakes can be opened manually in case of unpredicted situations for example in order to be able to move the KR QUANTEC HC manually in the event of a power failure.

Additional brakes. Compared with the standard version of the KR QUANTEC series, additional brakes are integrated in axes 2 to 5. They ensure that the robot is stopped even if the first brake fails.

### KR QUANTEC HC
- Controller: KR C5
- Rated payload: 300 kg
- Number of axes: 6
- Wrist variant: In-line
- Reach: 2,701 mm
- Pose repeatability: ±0.05 mm
- Weight: 1,150 kg
- Protection rating: IP 65
- Installation position: Floor

### KR 300 R2700-2 HC
- Controller: KR C5
- Rated payload: 300 kg
- Number of axes: 6
- Wrist variant: In-line
- Reach: 2,701 mm
- Pose repeatability: ±0.05 mm
- Weight: 1,150 kg
- Protection rating: IP 65
- Installation position: Floor
Extend your reach.
To keep your production on track.

Up to four robots can be operated on a single linear unit. KUKA linear units are available in various different sizes and payload categories, according to the robot series you are using.

KL 100 – for KR AGILUS
KL 250-3 – for KR CYBERTECH
KL 4000 – for KR QUANTEC, KR FORTEC and KR 300 PA, as well as KR 470 PA
Positionally accurate. Up to four robots can be operated on one linear axis. Multiple robot positions on the linear axis allow optimal adaptation to existing requirements and workspaces.

Flexible. Long travel extends the work envelope by several times the reach of the robot. The linear units are ideal for linking production lines.

Versatile. Floor, ceiling and wall-mounted variants are available, as well as a cover to provide protection from dirt during operations in harsh environments.

Powerful. Additional version with high torque (e.g. for milling applications) and a high-speed variant for tasks requiring extreme speed and short cycle times.

Productive. Moving workpieces/tools with additional carriages, driven or non-driven (tender carriages) helps to shorten cycle times.

Maximum productivity all along the line.

Maximize your productivity all the way down the line. KUKA linear units allow you to increase workspaces significantly.

Another major advantage: the linear units are implemented as an external axis – which means that no additional controller is required. The KUKA product range covers every payload category and every requirement. The spectrum ranges from ceiling-mounted units to the high-speed variant and even linear units with a protective cover. You thus hold all the options for decisively expanding your success margin.

KL 100 is the linear unit for the KR AGILUS robot series. It can be installed on the floor, ceiling and wall and supports up to 100 kilograms.

KL 4000 is suitable for the KR QUANTEC, KR FORTEC, KR 300 PA and KR 470 PA series. The KL 4000 is our linear unit for loads of up to 4,000 kilograms.

KL 250-3 is suitable for the KR CYBERTECH robot series with a payload of up to 300 kilograms.

The technical data in the tables apply exclusively to standard versions.
Success is down to position. Fast and precise positioners for greater quality and productivity.

KUKA offers a broad portfolio of workpiece positioners for payloads from 250 to 12,000 kilograms. Depending on the production task and workpiece, you will find the right solution for every application – for example, for ARC welding, spot welding or metalworking. The objective of every automation solution is to boost productivity and quality. With KUKA positioners, you can achieve this from all angles – they allow you to align workpieces quickly and precisely. Ideal for automating production operations. For this purpose, service-proven standard robotics components are used, which can be combined to form customized solutions. The result is highly dynamic automatic positioners with one to five axes. Depending on the specific task, kinematic systems of all sizes can be implemented for payloads ranging from 250 to 12,000 kilograms. With KUKA you are in a strong position to implement your automation ideas.
Whether standardized or customized – the optimum solution for every positioning task.

High productivity. Higher throughput, fewer rejects or the quick change of tool carriers: dynamic drives, perfect coordination between robot and positioner, and machine data that can be individually optimized for cycle time optimization enable successful production.

Efficiency and profitability. Robot positioner systems make use of proven KUKA robot components with a high proportion of identical parts. Preconfigured elements ensure reduced integration time, while KUKA.Sim ensures complete and easy simulation capability.

Uncompromising quality. Robots and positioners from KUKA operate with high precision and virtually error-free in all CP applications. The result of flexible, repeatable performance is consistently flawless workpieces.

Integration – simple, safe, fast. Electrically insulated faceplates, easy mastering with the KUKA EMD and simple programming: proven and familiar solutions and standardized interfaces stand for efficient integration and fast implementation of individual customer solutions.

Customized solutions from a single source. From robots and positioners to linear units and other components: the modular system ensures simple implementation of customer-specific solutions and thus precise coordination between positioners and workstations.

Mobile platforms and mobile robotics

Mobile solutions for agile production.
If you want to get things moving, you have to stay in motion.

Mobility is an important driver of Industrie 4.0. KUKA develops mobility concepts for the next stage in the evolution of more flexible industrial production. In the cyber-physical world of Industrie 4.0, established structures are becoming a thing of the past. Static production facilities and assembly lines are obsolete. KUKA develops intelligent, mobile units that work together perfectly and find their destination autonomously.
Mobile platforms from KUKA open up new dimensions of mobility in the age of Industrie 4.0. Whether for the aerospace or automotive industry, or for many other sectors, it has never been easier to integrate autonomous robots and mobile platforms quickly and reliably into cells and systems.

All mobile platforms ensure maximum freedom of movement. The Mecanum wheel system enables high-precision transport – even with the heaviest loads.

Autonomously navigating systems are used for fully automatic operation. Our portfolio of omnidirectional mobile robot platforms provides the foundation for the flexible production facilities of the future.

The factory of the future demands mobility and flexibility. Static production lines make way for the next generation of robots: intelligent, mobile robotic units are taking their place. Mobile robots navigate autonomously, act in swarms and offer total flexibility for industrial manufacturing. This is especially important for internal logistics. KUKA offers a vast mobility portfolio, from manually movable to autonomously navigating solutions.

Our robots work hand in hand with humans and align to the workpiece with Millimeter precision. In addition, the fully autonomous variants work without any induction loops, floor markings or magnets. Our range of mobile robots is heralding the next era of cyber-physical production.

Mobile robots receive their commands via WLAN. They perform their driving and handling tasks fully autonomously. They use algorithms to position themselves, plan their route and take on loads.

All mobile robotic systems from KUKA can be equipped with KUKA NavigationSolution. This makes them flexible and mobile. The navigation solution also includes an ideal fleet management system.

Mobile robots receive their commands via WLAN. They perform their driving and handling tasks fully autonomously. They use algorithms to position themselves, plan their route and take on loads.

KUKA.NavigationSolution. The reliable interface for your autonomous logistics.

Mobile robots receive their commands via WLAN. They perform their driving and handling tasks fully autonomously. They use algorithms to position themselves, plan their route and take on loads.

All mobile robotic systems from KUKA can be equipped with KUKA NavigationSolution. This makes them flexible and mobile. The navigation solution also includes an ideal fleet management system.

Autonomous control. KUKA NavigationSolution enables autonomous navigation of mobile platforms – with no risk of collision and without the need for artificial markings.

The software acquires all the data from the safety laser scanners and wheel sensors and uses them to create a corresponding map of the surroundings by means of the SLAM method (Simultaneous Localization and Mapping).

The system responds to changes in the environment – which occur frequently in a flexible logistics system. The use of virtual tracks makes it possible to move the platform exclusively along defined routes.

Flexible software integration. KUKA offers an Eclipse-based development environment that can be used to program applications in Java. The modular Java API with suitable interfaces for the requirements of mobile robotics allows the integration of third-party software. The existing platform fleets can be simply updated, and other platforms can be added to or removed from the existing system.

Exact positioning. KUKA NavigationSolution offers the following options for high-precision positioning of the mobile platform in its environment:

- Fine localization for precise determination of the vehicle position relative to the object or in an environment
- Fine positioning for increased pose repeatability
- Relative positioning through CAD-based object recognition and tracking, e.g. for picking up loads

Hardware-independent software. The hardware-independent navigation software of KUKA NavigationSolution can be used for different platform kinematic systems.

It can handle any motion principles, including holonomic vehicles with Mecanum wheels, such as the KUKA omniMove.

The machine parameters are configured via a standardized interface.

Freely scalable, modular setup. Additional features, such as object recognition and tracking and relative positioning, enable coordinated planning.

Mobile platforms and mobile robotics

Get your production moving.

Mobile platforms and mobile robotics

KUKA.NavigationSolution. The reliable interface for your autonomous logistics.
KMP 1500. The solution for a flexible production process.

The KUKA KMP 1500 autonomously controlled platform is our answer to the increasing demand of production departments for shorter response times and greater flexibility in their manufacturing concepts. Predefined routes and rigid processes are a thing of the past in the factory of the future.

This is why KUKA develops intelligent, autonomous vehicles that supply materials to robots and machines with perfect timing. The KMP 1500 makes flexible production possible to an extent that has been unimaginable before.

Unrestricted and precise maneuvering. Thanks to KUKA omniMove drive technology, the KMP 1500 can move in any direction from a standing position. The sophisticated wheel technology allows for precise positioning with an accuracy of ±5 millimeters even in tight spaces. This results in space-saving and highly precise automation solutions for logistics.

Autonomous, flexible warehouse management. The KMP 1500 autonomously fetches the required components or returns them to the warehouse after processing. Thanks to the KUKA Navigation Solution, it can move about freely and without conventional guidance or navigation elements. This makes integration into modified environments much easier and increases efficiency in logistics management.

Strong, safe and reliable. With a payload capacity of up to 1,500 kilograms, the KMP 1500 safely moves your products through the entire manufacturing process. It meets all necessary safety standards and is also extremely flexible. Integrated safety laser scanners enable autonomous navigation through your production shop.

The KMP 1500 is an autonomously controlled platform that integrates seamlessly into the production process. The vehicle is also excellently suited to the matrix body shop. The KMP 1500 independently and autonomously handles the transport of the products through all process steps.

This production concept from KUKA enables you to optimize your logistics management. The KMP 1500 provides cost-effective support for your warehouse organization or between manufacturing processes – and is used only as needed.

**KMP 1500**
Dimensions (L × W × H) 2,000 × 800 × 470 mm (with scanners)
Weight 711 kg / 935 kg (with lifting system and battery system extender)
Rated payload 1,500 kg
Velocity straight ahead max. 1 m/s
Velocity diagonally and sideways max. 0.56 m/s
Wheel diameter 310 mm
Battery capacity 52 Ah / 96 V (at least 4 hours)
Charging time 1 hour
Lifting system (optional)
Lift table height max. 200 mm
Lifting speed max. 50 mm/s
Weight +144 kg
Battery system extender (optional)
Battery capacity 104 Ah / 96 V (at least 8 hours)
Charging time 2 hours
Weight +80 kg
Supplied accessories
Radio control unit
Floor charging contact plate
Brake release device

Product portfolio: Mobile platforms and mobile robotics

102_103
**KUKA omniMove.**

We move big things – with Millimeter precision.

**Simply move underneath and lift.** The KUKA omniMove mobile heavy-duty platform can move your XXL loads with ease. The heavy-duty AGV can be controlled manually, but can also move autonomously. Despite its enormous size and payload capacity, it navigates safely, moving virtually independently. You can also optionally expand it with a self-contained energy supply.

Specially developed wheels allow the mobile heavy-duty platform to move in any direction – even from a standing start. The sophisticated navigation system KUKA NavigationSolution ensures autonomous maneuvering without risk of collision and without requiring artificial floor markings.

The KUKA omniMove can be freely scaled in size, width and length within a modular system – just the way you need it. Mecanum wheel for maximum mobility: the specially developed KUKA omniMove drive technology based on the Mecanum wheel ensures that the KUKA omniMove can maneuver omnidirectionally. The wheels with individual, barrel-shaped rollers can move independently of each other. This allows the KUKA omniMove to perform translational and rotational motions in the tightest of spaces from a standing start. It can thus move swiftly and compactly in all directions.

**Operating condition**

- Ambient temperature: +5 to 40°C

**Power supply connection**

- Charger type 1: 400 V / 50 Hz / 32 A CEE
- Charger type 2: 480 V / 60 Hz / 30 A Hubbell HBL2731, UL

**Powerful.** Depending on the vehicle variant, the KUKA omniMove can safely and conveniently move even the heaviest components in XXL format. It has a payload capacity of up to 90 tonnes and – in the maximum version – reaches a length up to 30 meters.

**Precise.** The KUKA omniMove positions even enormous payloads to within ±3 millimeters without contact.

**Modular.** We design your ideal solution. You can choose from ten different vehicle variants, and we will then personalize your selection with individual option packages and modules – fully in accordance with your requirements and wishes.
KMR iiwa. Always on the spot – safely.

Optimizes your production significantly. The KMR iiwa is a combination of the sensitive LBR iiwa lightweight robot and a mobile, flexible platform. As the name and the individual components already suggest, the KMR iiwa stands out with its high degree of mobility and flexibility.

Manufacturing processes are changing constantly. This is why mobile robot systems must be very adaptable. Maximum mobility and autonomous working methods optimize your production significantly.

KUKA Mobile Robotics iiwa. The combination of mobile platform and intelligent, sensitive work assistant opens up a wide range of potential applications.

Intelligent system.

KUKA Mobile Robotics iiwa. The combination of mobile platform and intelligent, sensitive work assistant opens up a wide range of potential applications.

Combinalbe. Design your individual turnkey system solution. The modular KMR iiwa system offers numerous combinations of robot technology, mobile platforms and industrial components.

Sensetive. Seven special joint torque sensors on each axis of the LBR iiwa lightweight robot make it highly sensitive to its environment. It navigates safely and without protective fencing – external contact will cause it to stop immediately.

Autonomous. Thanks to the laser scanners, the mobile platform too can navigate fully autonomously. It monitors its environment. And it reacts immediately if a person or object is in the way.

Agile. Specially developed Mecanum wheels allow the mobile platform to move omnidirectionally and execute 360° rotations. A wheel consists of several rollers that are each aligned at an angle of 45° relative to the axle. This top-notch maneuverability shortens throughput times and reduces idle times in the manufacturing process.

Precise. The KMR iiwa achieves a positioning accuracy of up to ±0.1 millimeters, even in the tightest spaces.

Intelligent. With KUKA Navigation Solution, the KMR iiwa can reliably move around obstacles and look for a new route.

Independent. The vehicle and robot are supplied directly with power from Li-ion batteries.

User-friendly. KUKA Sunrise Cabinet and KUKA Sunrise OS for vehicles and robots simplify the operation and use of the KMR iiwa.

High-bay racking. Thanks to its innovative navigation system, the KMR iiwa operates autonomously and is able, for example, to set down machined workpieces or independently fetch required components.

Machine tool. The KMR iiwa takes over the tending of machine tools and relieves the human operator of strenuous and tiring tasks.

KMR iiwa. Always on the spot – safely.

Product portfolio_Mobile platforms and mobile robotics
Maximized performance, connectivity and flexibility – with the groundbreaking latest generation of robot controllers from KUKA that set the pulse of automated production racing: the KR C5 can be seamlessly integrated into existing infrastructures and immediately delivers added value with more efficient performance in all areas of application.

The KUKA smartPAD teach pendant was designed to master even complex operating tasks easily. KUKA ready2_pilot expands your programming options with teaching via manual guidance.
**KR C5 controller.**
The heartbeat of intelligent automation.

The production of the future is smart and operates on a whole new level with the KR C5. KUKA’s latest platform for robot controllers enables space-saving solutions, delivers supremely efficient performance and conserves resources. It can thus also be seamlessly integrated into heterogeneous automation landscapes, enabling a wide variety of robot applications.

The reduced hardware and lower energy requirements offer more application options with maximum cost-effectiveness. And thanks to the interconnectivity of the open platform design, more data are transformed into valuable information.

**Compatibility.** The current system software is functionally compatible with the KR C4 and has identical software applications and software technologies.

**Low training requirements.** The easy integration into control cabinets and the availability of service-proven system software enable fast start-up.

**Many control options.** Diverse options and hardware expansion possibilities, e.g., various I/O and communication options for a wide variety of system concepts.

**Interfaces for input/output signals**
- 16 input/output signals 24 V
- Safe signals for cell safety
- Safe signals for SafeOperation technologies
- PROFInet / PROFIsafe
- EtherCAT / CIP Safety
- Expansion module EtherCAT Slave / FSoE
- Expansion module PROFibus Master / Slave
- Expansion module DeviceNet Master / Slave
- Integrated Ethernet switch

**Supplied accessories**
- KUKA smartPAD
- Plug pack

**Controller options**
- Reserved installation space and device plate
- USB / USB peripheral power supply
- Various I/O and communication options
- Front panel interfaces
- Various cabinet locks
- Set of rollers
- Cable holder
- Fork slots
- Exchangeable SSD mass storage medium
- KUKA smartPAD cable reel
- Transformer

**Supported robot series**
- KR CYBERTECH nano
- KR CYBERTECH nano ARC
- KR CYBERTECH ARC
- KR IONTEC
- KR QUANTEC
- KR FORTEC
- KR 1000 titan
- Palletizing robots

**Technical data**
- Infeed: 380 – 480 V AC 3-phase (without transformer), 380 – 575 V AC 3-phase (with transformer)
- Axes: 6 robot axes, up to 6 additional external axes
- CPU Architecture: Intel X86 (main CPU) + ARM (for safety functions)
- Internal memory: 60 GB (SSD M.2)
- Dimensions (H × W × D): dualcab 720 × 720 × 600 mm, triplecab 960 × 720 × 600 mm, quadcab 1,210 × 720 × 600 mm
- Weight: dualcab approx. 83 kg, triplecab approx. 107 kg, quadcab approx. 131 kg, controller approx. 22 kg
- Protection rating: IP 20 (for the cabinet)
- Ambient temperature during operation: 0 °C to +45 °C
- Safety: ISO 10218-1, Robots and robotic devices, ISO 13849-1 Cat. 3 / Performance Level d
- Certification: UL / CSA

**Optional digital I/O/safe I/O**
- Active cooling heat sink and fan
- Power supply and intermediate circuit

**Device Plate**
- KR CS dualcab
- KR CS triplecab
- KR CS quadcab

The cabinets of the KR C5 are available in different sizes and can be equipped in a modular fashion.
KR C5 micro.
Small footprint with big-time performance.

Maximum performance, connectivity and flexibility in the smallest of spaces. This is the new KR C5 micro robot controller for small robots. The KR C5 controller generation from KUKA is programmed for the future. For instance, the KR C5 micro unites robot, PLC, motion and safety control in an ultra-compact housing with a volume of just 16 liters.

Smaller, more flexible, smarter. Developed as an open and flexible platform with no compromises, the KR C5 micro represents the next quantum leap in robot control. The controller meets current field bus standards for cell and line integration via software options. At the same time, the KR C5 micro is equipped with the necessary hardware resources and flexible I/O ports in order to adapt quickly to future tasks and standards as well.

The wide range of technology products enables the quick and easy implementation of robot applications. The controller meets current field bus standards for cell and line integration via software options. At the same time, the KR C5 micro is equipped with the necessary hardware resources and flexible I/O ports in order to adapt quickly to future tasks and standards as well.

Features
- Drive axes (6 axes)
- Embedded computer with safety controller
- Ethernet interfaces
- Digital I/O interfaces
- Discrete safety signals
- Active cooling

Supplied accessories
- KUKA smartPAD
- External battery box
- Plug pack
- Mounting brackets
- Power supply lead

Supported robot series
- KR CYBERTECH nano
- KR AGILUS
- KR DELTA
- KR SCARA
- LBR iisy

Technical data
- Infeed: 200 V – 240 V AC, 1-phase
- 50 Hz – 60 Hz, 2-phase
- 6 axes: 7 x 12 A + 3 x 5 A
- CPU ARCHitecture: Intel X86 (main CPU) + ARM (for safety functions)
- Internal memory: 60 GB (SSD M.2)
- Dimensions (L x W x H): 392 x 300 x 134 mm (without attachments and without bases)
- Weight: 9.8 kg
- Ambient temperature during operation: 0 °C to +45 °C
- ISO: 6020
- EtherCAT slave + FOE (via external gateway)
- PROFINET + PROFIsafe
- EthernetIP + CIP Safety
- Ambient temperature during operation: -25°C to +65°C
- ISO 12100-1 Cat. 3 / Performance Level d
- UL / CSA

Features
- Seamless integration into OT, IT and cloud environments
- Ethernet and digital I/O interfaces, supports various cloud systems

Compatibility
- Simple integration into existing infrastructures
- Seamless integration into the KUKA robot portfolio
- Easy and intuitive to operate via KUKA smartPAD (KSS) and KUKA smartPAD pro (iiQKA OS)

Low TCO
- Reduced energy consumption
- Minimized complexity
- Increased reliability

Ready for digital
- Seamless integration into OT, IT and cloud environments
- Ethernet and digital I/O interfaces, supports various cloud systems

Ready for use worldwide
- Meets globally relevant ISO standards
- 25 languages available, including the most important Asian languages

**KUKA smartPAD.**
A firm grip on all tasks.

Simple programming with the KUKA smartPAD. Whether you’re a novice or programming expert, the KUKA smartPAD will quickly take you to your goal. Because it offers the suitable programming options for every requirement. This single control panel enables you to perform the most varied of tasks.

Incredibly efficient: programming with inline forms. KSS-based KUKA robot controllers offer inline forms for fast, error-free programming of tasks and motion steps. They can be called via menus and are available as standard. This simplifies even the programming of RoboTeams with up to six synchronized robots.

Customer-defined program modules. KUKA integrators can expand the library of available KUKA inline forms according to customer requirements. This leads to the creation of special applications which can be easily programmed for recurring tasks. A competitive advantage for system integrators: specially developed inline forms allow for unique solutions, optimally tailored to the companies which use them.

Universally deployable in the KUKA world. All KUKA robots running on KSS and Sunrise.OS can be operated in the desired language with the KUKA smartPAD.

Comfortable handling. Straps and handgrips that can be used with both hands greatly simplify operator control. An optional shoulder strap enables the operator to work without tiring – particularly during time-intensive projects.

Simple robot jogging with ergonomic 6D mouse. The 6D mouse offers intuitive jogging and reorientation of the robot in three or six degrees of freedom.

Eight jog keys. Up to eight axes or external axes can be controlled directly using separate jog keys on the KUKA smartPAD with no switching required.

Integrated protectors. Integrated protectors offer the greatest possible protection in the event of falling. The scratch-resistant display and IP 54 protection rating enable operation in harsh industrial environments.

Simple data transmission. Two easily accessible USB ports enable direct saving and loading of application programs and connection of other supported USB devices.

Efficient operator control. Inputs are made quickly and easily via a brilliant, capacitive touch display. Inputs are made quickly and easily via the 8.4" screen.

KUKA smartPAD cable reel – simple, flexible, safe. With the smartPAD cable reel, KUKA offers a functional retraction system for the smartPAD connecting cable. The system convinces through its easy handling and installation while also ensuring a safe work environment.

Integrated protectors. This provides the KUKA smartPAD with maximum protection in the event of falling. The scratch-resistant display and IP 54 protection rating enable operation in harsh industrial environments.

Comfortable, relaxed handling. The KUKA smartPAD features impressively pleasant handling. Straps and handgrips that can be used with both hands greatly simplify operator control. An optional shoulder strap enables the operator to work without tiring – particularly during time-intensive projects.

State-of-the-art hardware. Thanks to the latest hardware, the KUKA smartPAD impresses with strong performance. Two easily accessible USB ports enable direct saving and loading of application programs and connection of other supported USB devices.

Efficient operator control with brilliant, capacitive touch display. Inputs are made quickly and easily via the 8.4" screen.

Elements for ergonomic left- and right-handed operation. The user-friendliness of the KUKA smartPAD is rounded off with the service flap for easy cable exchange.
KUKA smartPAD pro.
The intuitive iiQKA interface.

KUKA smartPAD pro. The future is in your hands. With the KUKA smartPAD pro and the new iiQKA OS operating system, KUKA is revolutionizing robot control – simply and intuitively.

One teach pendant for all. The ergonomic KUKA smartPAD pro gets your robots moving. With this iiQKA interface, you can operate all KUKA products that run with iiQKA OS.

In conjunction with the new iiQKA OS operating system, the next-generation teach pendant delivers precise results and virtually unlimited application possibilities. Thanks to the intuitive handling, even complex tasks can be implemented quickly – with no knowledge of programming.

Flexible
One teach pendant for all with a variety of expansion options for even more functionalities of the smartPAD pro.

Robust
Designed for use in industrial environments: scratch-resistant display, protected against falls from up to 1.5 meters and certified to IP 54.

Versatile
Equipped with a 10.1-inch touch screen that can be operated while wearing gloves, with 5 MP camera and 6D mouse and a variety of ports and interfaces.

Ergonomic
Designed for fatigue-free use, even in prolonged operation, and with intuitive user interface.

...Robot controller
Teaching instead of programming. Robot handling easier than ever. As the world’s first control package of its type, KUKA.ready2_pilot makes robot control mere child’s play. The package is quickly mounted on the robot and can be used directly without complex programming. Manual guidance of the robot is all that is required to teach it the desired sequences. From precise welding to rough palletization, and from small robots such as the KUKA KR AGILUS to heavy-duty giants such as the KUKA KR 1000 titan – KUKA.ready2_pilot enables you to master a wide range of different requirements simply and straightforwardly.

Intuitive, reorienting 6D mouse. Operation of KUKA.ready2_pilot is child’s play and is carried out using an intuitive 6D mouse with no training required. Fastened with adapter plates, this mouse can be used from different positions, always within the user’s reach.

Freedom of motion to the right degree. Move the robot exclusively on the desired paths by simply deactivating directions that are not required. This prevents unintentional slipping during motion and saves time-consuming corrections.

Connectivity and flexibility. The wireless concept of KUKA.ready2_pilot is compatible with all standard KUKA robots and offers maximum freedom for operator control.

Adaptable navigation buttons. Two buttons on the side of the 6D mouse enable quick access to freely selectable functions. From opening and closing a gripper to adjusting process parameters or saving motions in the robot program – a simple click suffices and saves precious time.

KUKA.Handguiding with ready2_pilot. Guide your production to success.
Holistic concept, modular design. The standard for dynamic production processes.

Tested in a real environment, used with maximum flexibility and preconfigured for immediate commissioning in your individual production environment: that is KUKA cell4® production. KUKA develops global standards to allow customers and partners to achieve intelligent and efficient automation.

One-stop shopping: Preconfigured, perfectly coordinated components and interfaces with a matching process package. With this in mind, KUKA offers a comprehensive range of training courses, services and a wide variety of expansion options.

Global standards: Standards ensure perfectly harmonized and internationally applicable production concepts and help to sustainably reduce service costs. With global service, local support offerings and training, for example, as well as standardized components and interfaces.

Maximum efficiency: The manufacturing cells require only a minimum of floor space and are individually scalable. Thanks to the constant acquisition of process data, they ensure consistent quality even at high production rates – and this with the highest quality standards and a significantly low TCO.

Ready for immediate use: Due to the pre-assembled components, the cells can be delivered in a very short time and put into operation extremely quickly. This allows you to start your production without delay and to concentrate your own resources on specific integration tasks.

Flexibility at the highest level: The modular cell concept can be integrated into existing production processes or easily adapted to changing production and market requirements. The cells are transportable and can be relocated quickly and easily.
Manufacturing cells

KUKA cell4. The ideal platform for modular production.

cell4 is KUKA’s answer to the constantly growing challenges for the automation of production processes. If you want to survive in global competition, you need a production system that offers maximum efficiency, while at the same time being able to react flexibly to changing requirements. The cell4 concept combines high-performance, optimally coordinated components to form a compact complete solution.

The modular design with open interfaces and a wide range of optional modules enables perfect adaptation to your specific tasks and applications. Whether it concerns adhesive bonding, pretreatment, AR welding or premachining, the manufacturing cells can be put into operation quickly and are already certified according to German, European and international specifications. This ensures the shortest possible commissioning times.

cell4 incorporates KUKA’s combined production and process experience – expertise that is available to you throughout the cells’ entire life cycle as well as for specific process issues.

Optimal kinematics for all process steps. From high-quality KUKA robot components to high-performance turntables and positioners, the cell4_production series is built around high-end components that are optimally coordinated. They ensure maximum utilization of the workspace.

One controller for all systems. In the cell4_production cell system, KUKA offers an easy-to-learn cross-component control and operating concept. This combines robot control, PLC control, motion control and safety control, thus practically eliminating the need for additional control components.

High-quality technology packages. Through customized technology packages, KUKA ensures that the cell4_production manufacturing cells are optimally adapted to the respective application immediately and can be put into operation right away. What makes the flexible manufacturing solutions particularly impressive is the seamless integration of hardware and software application packages from KUKA technology partners and other third-party suppliers.

Maximum safety. The safety equipment is already included in all cell4_production cells. From light barriers to protective enclosures and safety sensors, all systems are tested under real conditions and certified according to German, European and international standards.

Minimum space requirements. KUKA’s high level of automation expertise is also evident in the ergonomics and compact design of the cell4_production cells. Thanks to their practice-tested design and their perfect utilization of the workspace, they are among the most compact manufacturing cells on the market in their respective performance classes.

Remote Service. The control system of the cells is prepared for Remote Service (remote maintenance), so that rapid support can be provided by KUKA specialists if required.

KUKA cell4_arc. Ideal spaces for MIG/MAG welding processes.

KUKA MIG/MAG cells are quickly available and can be custom-configured with a range of versatile, modular standard packages and options. Whether for steel or aluminum, KUKA cell4_arc cells can be configured to suit your production volume and your specific welding processes. For utmost manufacturing efficiency, compact solution in confined spaces.

- Complete compact, portable cell on a base frame
- Broad application spectrum with many preconfigured variants
- Optimized for maximum output in small production areas
- Assured quality with optional monitoring of process parameters
- Access to KUKA Xpert – the digital knowledge database for all KUKA products

Supremely equipped for all tasks.
Application software for successful robotic automation.

The software options are tailored to the most common robot applications – each application is easy to program, ensuring high process reliability. The optional features can be installed on the controller easily and quickly and can also be tailored to the specific production environments.
**KUKA.ArcTech.** For automated arc welding with easy programming and fast operation.

The KUKA ArcTech family adds intuitive commands, structured menus and practical status keys to a KUKA robot system for robotic ARC welding.

With our application packages for ARC welding, KUKA offers a wide range of functions enabling easy operation of ARC welding processes as well as efficient and fast programming. Preconfigured libraries ensure high compatibility with all power sources commonly available on the market and enable uncomplicated integration into the production facility. By mirroring the integrated EasyTeach status keys to the KUKA ready2_pilot keys of the 6D mouse, welding technology commands can be programmed without taking your eyes off the weld seam.

Areas of application: Additive manufacturing, 3D printing, ARC welding, other welding

**KUKA.SeamTech.** For operating line laser sensors for seam detection and tracking purposes.

The KUKA SeamTech Tracking and KUKA SeamTech Finding application software can be optionally added to the KR CS robot controller. With the aid of an intelligent triangulation sensor, the robot can use KUKA SeamTech Finding to detect components and seams prior to welding and use KUKA SeamTech Tracking to track edges and seams during the welding process.

Smooth communication between sensor and controller. KUKA SeamTech Finding and Tracking are options for controlling and programming intelligent triangulation sensors via Ethernet – SeamTech Tracking even makes use of a powerful real-time protocol.

Programming made easy with KUKA programming aids. The application programming of robot sensor commands is carried out as usual with clear inline forms that can be programmed quickly. Status keys which enable robot and sensor functions to be operated quickly also support this process.

Flexible combinable technology packages. KUKA SeamTech Finding and Tracking are independent technology packages that can be combined with other options, for example with ARCTech Basic, ARCTech Advanced, LaserTech or GlueTech.

**KUKA.TouchSense.** Deviations in shape or position of workpieces are reliably detected and compensated.

KUKA TouchSense is an option package that determines and compensates for deviations in the shape or position of weld seam preparations and workpieces by means of comparative measurements prior to welding. The application software is normally used for ARC welding tasks.

The component position can be determined using the Fast Measurement inputs. Very precise position data can be determined using the Fast Measurement inputs.

Custom-tailored correction calculation. Fast and custom-tailored application programming through preconfigured correction commands.

Programming made easy with KUKA programming aids. The application programming of robot sensor commands is carried out as usual with clear inline forms that can be programmed quickly. Status keys which enable speedy operator control during start-up and maintenance also support this process.

Areas of application: ARC welding, other welding
KUKA.Tracc TCP. Robots automatically monitor and update the TCP in production operation.

KUKA.Tracc TCP is a highly precise software- and hardware-based TCP (Tool Center Point) calibration and checking system. KUKA.Tracc TCP is normally used for spot welding, ARC welding and adhesive application tasks.

The option package determines the actual TCP values (X, Y, Z) and thus ensures correct positioning on the workpiece. This safeguards productivity and process reliability, which can be impaired by welding torch deformation or the production-related tolerances of wearing parts, among other things. KUKA.Tracc TCP requires a fork-type photo-electric barrier and a connecting cable.

Areas of application: Additive manufacturing, 3D printing, palletizing, painting, ARC welding, adhesive bonding, sealing, other welding.

Highly precise measurement results. Very precise TCP position data are determined via the unique measuring algorithm.

Full system integration. The measuring system includes a comprehensive interface to the higher-level controller.

Transparent measurement results. The measurement results are saved and depicted graphically over time.

KUKA.LaserTech is an add-on option package for configuring and programming laser applications – for example, laser cutting or laser welding.

KUKA.LaserTech enables the integration of laser controllers and other devices of the application periphery, e.g. gas valves, consumables (welding wire, welding powder) and optics, into the robot controller.

Flexibility
- One software package for various laser applications, for example, welding, cutting, brazing or soldering
- Close cooperation with partners to integrate processing optics, for example, Solid Cutter from Precitec
- Interfacing of laser equipment possible using various field buses
- Combines with other KUKA software packages such as KUKA SeamTech for straightforward integration of sensor systems, seam tracking and component detection

Quality
- Control of the laser power proportional to the velocity
- Support for extremely precise motion sequences
- Time and distance-based slopes for the laser power

User-friendly design
- Quick and simple programming of process commands using the KUKA standard inline forms
- All process-relevant parameters (laser, wire, gas, etc.) can be controlled via the robot
- Quick access to important functions using icon status keys

Productivity
- Access to the laser can be switched between several robots very quickly in order to optimize utilization of the laser source
- Numerous functions to facilitate programming – for example, the step seam function, ready-made geometries and wire cutting function

Areas of application: Additive manufacturing, 3D printing, cutting, deburring, laser welding and laser cutting.
**KUKA.ForceTorqueControl.** Allows the use of a force/torque sensor.

The KUKA ForceTorqueControl option package allows the use of a force/torque sensor on the robot for implementing special applications in which the robot has to apply defined forces and torques or modify its behavior on the basis of the forces and torques that occur.

**Areas of application:** Assembly, deburring, machining and polishing, riveting, clinching, fastening, grinding, polishing, screw-driving.

**Integration**
- Intuitive programming interface for creating force-controlled tasks:
  - KUKA.ForceTorqueControl wizard + inline forms
  - Graphical representation of the process: forces, torques, detected paths and angles via FTCtrl – RSI monitoring function
  - Sensor connection possible via Ethernet (KLI and KONI) and RSI inputs and outputs

**Performance**
- Best control performance in its class: KUKA.ForceTorqueControl processes within 4 milliseconds
- Distinction between gravity and applied forces and torques: integrated gravitational force compensation
- Implementation of assembly in motion tasks: combinable with KUKA.ConveyorTech

**Flexibility**
- Expert programming for the implementation of sophisticated applications: FTCtrl jobs customizable and expandable through RSI Visual

**KUKA.PerceptionTech.** Allows your robot to perceive the environment.

KUKA PerceptionTech is an option package for commissioning an rc_visard sensor from Roboception. Additionally, it is possible to access the sensor functionality via the software during the runtime.

Object management for LCs and SKUs. You can make the settings for load carriers and stock keeping units yourself.

**Inexpensive and effective application.** You can achieve a high level of productivity using this low-cost solution for bin-picking of non-mixed parts.

**Quick and easy start-up.** The bin-picking application can be configured directly on the KUKA smartPAD in just a few steps.

**Quality from a single source.** The complete KUKA package is a top-class, tailored solution comprising hardware and software.

**KUKA.VisionTech.** Powerful 2D object, code and OCR recognition with integrated quality control.

With the high-quality camera in its IP67 housing, object recognition allows flexible robot operation, even in unstructured environments. Code recognition simplifies the traceability of your products and is able to safeguard quality and reduce costs in the long term due to automatic checks.

**Reliable and powerful flexibility**
- The industry-leading COGNEX library provides powerful and robust algorithms
- Detects a large number of parts with a high degree of reliability

**Cost-effective and robust**
- Only camera required, no additional image processing hardware needed as image processing is handled by the KUKA controller
- Flexible software platform to upgrade the system over time without new hardware
- Fewer parts lead to longer operating time
- Works with any KUKA robot

**Less effort for integration**
- Wizard-supported programming in WorkVisual
- Easy-to-use technology package installed via WorkVisual
- Workshop settings during start-up and operation can be made on the KUKA smartPAD
- Wizard-supported calibration on the KUKA smartPAD
- Web server-based image viewer during production operation
**KUKA.CNC.** Enables you to operate your robots as with a CNC controller.

With KUKA CNC, an NC controller kernel has been completely integrated on a KR C5, making it possible to process NC programs (G-code) directly on the KUKA KR C5 controller.

**Areas of application:** Additive manufacturing, 3D printing, drilling, cutting, deburring, grinding, polishing

Programs with up to one million path points have been successfully processed. The short distances between the individual CNC path points, together with advance path planning with a range of 150 path points, result in substantial improvements in the path accuracy and continuous-path performance of a KUKA CNC robot.

**Familiar user interface for fast programming.** KUKA robots perform machining tasks like machine tools – and can be programmed like them too in G-code (DIN 66025) thanks to the KUKA CNC user interface. Users understand them straight away, can create programs using a CAD/CAM process chain and, after simulation, execute them on the robot without having to compile them into the robot language. Already included: tool radius correction, sister tools and many other familiar CNC functions.

**KUKA.Gripper&SpotTech.** Simple control for grippers and pneumatic spot weld guns.

KUKA.GripperSpotTech is an add-on technology package for the configuration, control and programming of up to 32 grippers for industrial applications. For each gripper, up to 16 switching states can be defined and multiple inputs and outputs or signals can be used. Up to 512 input signals and 512 output signals can be defined.

**Advantages**
- 32 freely configurable grippers
- 256 configurable welding programs
- Gripper conditions statically and dynamically monitored
- Unlimited user-defined gripper icons
- Freely programmable error handling routines
- Graphical user interface with indicator lamps, status display and online adaptation
- Adaptation via WorkVisual and, for productionrelevant elements, on the KUKA smartPAD

**KUKA.PalletTech.** Allows easy configuration of complex palletizing tasks.

KUKA PalletTech is an add-on option package that can be used for the simple implementation of palletizing applications. KUKA PalletTech supports so-called mono-palletizing, i.e. the un-mixed palletizing of products on pallets using a robot in a palletizing cell. KUKA PalletTech takes into consideration all major cell components of a palletizing cell, such as infeed and outfeed stations, grippers, pallets, products and slipsheets.

**Quick configuration of cell components.** The PalletTech editor in KUKA WorkVisual ensures guided and complete configuration of cell components such as grippers, infeed stations and outfeed stations.

**Areas of application: Handling, resistance spot welding.**

**Areas of application: Handling, palletizing / packaging / pressing / pick & place / handling / material transport.**
KUKA.PickControl. Simply package more productively by coordinating multiple robots.

PickControl is an add-on option package for control, management and monitoring of pick & place systems. PickControl can be used to pick up parts quickly using one or more robots and place them in an organized manner, no matter what orientation the parts have or what position they are in. The size and shape of the parts can vary. The work area can be a fixed work area (e.g. a fixed location) or a moving work area (e.g. a conveyor).

Areas of application: Handling, material transport, pick & place

Complete package with hardware and software. KUKA supplies you with everything you need for the automation of pick & pack tasks. From the hardware, such as cameras and lenses, to standardized cabling and software solutions.

Integrated KUKA WorkVisual simulation tool. The KUKA.WorkVisual engineering suite enables you to design and configure your system. Even if you use an industrial PC for your image processing, Configuration interfaces and runtime are strictly separated from one another.

Fast start-up with wizard. A wizard helps you with programming by providing step-by-step start-up assistance. Among other things, this helps you to avoid errors and save time when calibrating conveyors or image processing systems.

Scalability. The processing power is insufficient? No problem: KUKA.PickControl is scalable. If required, you can simply offload the processing power to one or more industrial computers to increase your capacity.

KUKA.SmartBinPicking. Unssorted parts no longer pose a challenge.

KUKA.SmartBinPicking. With the intelligent software expansion KUKA SmartBinPicking, even objects lying loose in containers can be gripped and moved quickly and easily. The system uses a 3D environment for visualization. Motions are determined on the basis of a powerful library.

Less downtime. Collision-free path planning incorporating the entire structure of robot, gripper, and environment avoids downtime.

Suitable for beginners. The simple workflow enables the implementation of bin-picking solutions even for beginners. As user, you can create your project flexibly.

Low integration effort. Integration at the partner company requires little effort, thanks to predefined and compatible components.

Automatic path planning. The robot path is planned by SmartPathPlanning without singularity and collision in a highly efficient way to empty the box as fast as possible, thanks to the bin-picking application.

Easy import from KUKA.SIM. Direct connection to configuration UIs via WorkVisual allows easy import of the KUKA.SIM model to activate SmartPathPlanning.

Optimized object recognition. Workpiece recognition using artificial intelligence enables optimized recognition even in difficult scenarios.

KUKA.EqualizingTech. Compensates servo spot-welding guns through motions of the robot.

KUKA.EqualizingTech is an add-on option package for KUKA.ServoGunBasic and KUKA.ServoGunAdvanced. It enables the robot to compensate for incorrect positioning of workpieces.

Maintenance and costs. The complicated commissioning required for pneumatic compensation systems can be eliminated through use of the application software. The elimination of conventional components in the compensation system through KUKA.EqualizingTech also saves you investment costs and reduces maintenance requirements.

No additional elements required. Thanks to the KUKA.EqualizingTech software, additional components (such as linear bearings, support brackets or valves, pressure reducers and hoses) can be dispensed with. Sensors, electrical control systems and a compressed air infrastructure are also no longer required.

Weight reduction. The use of KUKA.EqualizingTech substantially reduces the overall weight (compared to conventional spot weld guns) by 10 to 15 percent.

KUKA.RoboSpin. Better welding due to rotary motion.

KUKA.RoboSpin makes it possible to execute a spin motion about the TCP. The spin improves the weld quality and reduces the tip wear due to tip dressing. It can be executed during or after welding. If RoboSpin is installed on the robot controller, backward motion is not possible.

Higher weld quality. By having the robot rotate the electrode tips during the process, you improve the weld quality. In addition, KUKA.RoboSpin is also able to handle sheet metal joints that are difficult to weld and coated panels with ease.

Efficient operation. The improved welding process protects the tip against wear due to tip dressing, resulting in a longer tip life.

Areas of application: Resistance spot welding

KUKA.RoboSpin is an add-on option package for KUKA.ServoGun Basic and KUKA.ServoGun Advanced.

Areas of application: Resistance spot welding

Product portfolio_Application Software 136_137
**KUKA.ServoGun.** Enables electric control of spot welding guns.

The KUKA ServoGun software technology package is a software option for controlling spot welding guns with an electric servomotor. It enables you to use the external axes of the robot controller to control the servo gun.

Two technology variants are available in the KUKA.ServoGun technology package: KUKA.ServoGunAdvanced (currently only available from KUKA) for the use of electric servomotors with an integrated force sensor and KUKA.ServoGunBasic, with which electric servomotors are used following force calibration by the robot controller. The two variants therefore cover different applications.

**Areas of application:** Resistance spot welding

---

**KUKA.ProcessScreen.** Visualize, monitor and document comprehensively in real time.

The KUKA ProcessScreen process monitoring software enables overall and component-oriented documentation, evaluation and analysis of your production data – particularly for continuous-path processes, but also for point-to-point processes.

Through comparison with individually configurable limit values, the software can detect any violation of these limits and thus allows you to keep an eye on the quality of your production. The results are available in tabular and graphical overviews at the touch of a button.

**Areas of application:** Additive manufacturing, 3D printing, application / painting / bonding, ARC welding, adhesive bonding, sealing, laser welding and cutting, measuring and inspection, other welding (grinding, polishing, spot welding)

---

**Easy installation.** KUKA.ServoGun is easy to configure thanks to its start-up wizard. Status keys make operating the basic functions very straightforward. Thanks to the detailed acceptance documentation, you can improve diagnosis and logging after start-up.

**Flexible application.** With KUKA ServoGun, you can use any servomotors on the market that are compatible with KUKA controllers. An integrated operator control concept makes it possible to use inline forms for all applications. In addition, the software provides freely configurable weld timer interfaces and numerous expansion options. The effective welding gun force is independent of gravitational force, age and temperature.

**Efficient calibration.** The software allows for automatic force calibration using an external, controller-supported force sensor which is operated via the standard interface of the mastering sensor. In addition, background processes such as robot handling provide greater process efficiency during stationary tip dressing.

**Precise compensation.** Thanks to the new force control mechanism, you achieve greater force accuracy with KUKA ServoGun. This ensures a higher level of quality, precision and resistance to external influences.

---

**Simple operation**
- Freely configurable for various applications
- One software package for the entire production process
- Reduced training requirements

**Scalability**
- Easy expansion to further processes: ARC welding, laser welding, laser cutting, adhesive bonding, CNC

---

**Increased quality**
- Direct feedback from the manufacturing process
- Data-driven analysis
- Efficient process optimization
- Optimal troubleshooting

**Web-based software**
- Visualization on any end device
- All important data at a glance
- Local storage of process data
- Transfer of data to distributed customer networks possible
**KUKA.HMI.** Makes communication between humans and machines easier and more efficient than ever.

The KUKA.HMI product family offers perfectly tailored software solutions for operating, controlling and monitoring robots in industrial production. Depending on requirements, the KUKA.HMI easy and KUKA.HMI zenon variants allow you to quickly convert the generic user interface on the KUKA smartPAD to a customized appearance that is optimally adapted to the user’s needs and can be used with no training required. Compatibility with the KR C5 robot controller makes KUKA.HMI the ideal visualization software for individual industrial robots as well as for complex robot cells.

**Productivity & safety**
- Visualization of current and target status as well as provision of guided work instructions via HMI (e.g. for start-up & tool change)
- Quick overview of frequently used KPIs for process control
- Interaction between KRL programs and HMI possible – control and querying of HMI views with KRL
- Targeted fault diagnosis through fault visualization via HMI

**Efficiency & convenience**
- “What you see is what you get” editor in WorkVisual
- Simple configuration using drag & drop function
- No programming knowledge required
- Multilingual user interfaces

**Cost-effectiveness**
- No additional editor required
- Compared to HMI Zenon – cost savings of up to 85 percent per robot

**KUKA.ConveyorTech.** Organizes the coordination of robot actions and conveyor motions.

The KUKA.ConveyorTech option package is designed as a solution for applications that require synchronization between the robot motion and the motion of workpieces through a conveyor system. Through synchronization, the robot can process, grip or set workpieces down on the conveyor system. The position of the workpiece on the conveyor system and the motion of the conveyor system must be clearly known for this purpose. Conveyors of various designs or mobile platforms can be used as conveyor systems.

**Areas of application:** Handling, material transport

- **Shorter cycle times.** The robot uses the KUKA.ConveyorTech software in the background to synchronize with the conveyor motion. This means that it is not necessary to stop the conveyor during the production process. The new motion command DynamicLIN makes it possible to optimize the velocity of the robot for linear motion.

- **Synchronization “on the fly”.** When changing from a non-synchronized to a synchronized program section, the software independently calculates the motion to be synchronized with the conveyor. As the conveyor runs continuously, the entire production process is thus more flexible. Robot and conveyor can be stopped synchronously in case of a stop request (e.g. Emergency Stop).

- **Greater flexibility.** The KUKA.ConveyorTech technology package impresses with its high precision and can thus also be used flexibly in assembly processes. External axes (linear units) can be coupled to the conveyor progress (EO driver), with the result that the robot can work longer parallel to the conveyor. The “External conveyor” option offers the possibility of transferring the position and workpiece information from a linear conveyor or even AGVs (6D) via a PLC.
Here’s to great cooperation. Software packages for the cooperation of machine, human and robot.

Base technologies can be used with any KUKA robot — irrespective of the payload, variant or application. Be it software for sensor communication, for the intelligent networking of robots or for enabling safe human-machine interaction: KUKA base technologies boost the flexibility and competitiveness of your production operations.
KUKA.PLC mxAutomation. The convenient, universal interface makes KUKA robots extremely easy to operate.

Operate robot-based production machines independently of the controller. With the KUKA.PLC mxAutomation control software, external controllers can command KUKA robots with all basic motion commands. This provides an easy route to implementing a central, customer-friendly operator control concept for robot-controlled production machines. The outstanding kinematic and safety-relevant functions of the KUKA controller are still available. This is because the mxAutomation command interpreter of the robot controller communicates the commands to the path planning system, which sets the robot in motion with the usual precision and reliability.

Simple programming. With KUKA PLC mxAutomation, the user requires minimal knowledge of robot programming. The mxAutomation function blocks allow the KUKA robot to be commanded within the familiar programming environment.

High flexibility. If the requirements in production are changed, the appropriate modifications or expansions can be implemented at any time with mxAutomation-based operator control. The flexibility made possible by using robots with regard to processing new series of parts or performing additional tasks is made available for the operator in his customary environment.

Certified in accordance with PLCopen. KUKA is the first robot manufacturer to meet the requirements of the PLC Open organization with the KUKA.PLC mxAutomation software and is thus certified in accordance with “PLCopen Motion Control Part 4”. Access functions predefined by KUKA are available to the customer.

Picking up moving workpieces. Connecting KUKA PLC mxAutomation to KUKA ConveyorTech enables robots to pick up moving workpieces. The motions of the robot are adapted by the application software to those of assembly lines and conveyors. Using KUKA.VectorMove enables the robot to be switched vectorially to “soft” mode in order to facilitate the removal of components from injection molding machines and die-casting machines.

Simple control. The combination of robot and machine control by means of KUKA.PLC mxAutomation enables KUKA robots to be integrated effortlessly into existing operator control concepts. The robot can therefore also be controlled via the customary human-machine interface. Teach pendants for the machine can be used for setting the robot as well, provided appropriate safety precautions are implemented. A good integration example in this context is the incorporation of KUKA robots into the Sinumerik/Simatic world on the basis of mxAutomation, as offered by Siemens.

KUKA.SafeOperation. Safe human-robot collaboration.

You want to produce quickly, safely and in a space-saving manner? The KUKA SafeOperation software supports human-robot collaboration in every respect.

KUKA.SafeOperation combines the latest safety-relevant software and hardware components. You simultaneously define and monitor the workspaces and protected spaces. In this way, you can dispense with mechanical monitoring of the workspaces. Moreover, you reduce the cycle times. KUKA SafeOperation supports safe and efficient cooperation by means of human-robot collaboration (HRC). Safe operation, an al stop can be used in manual loading stations, for example, to reduce the distance to the operator.

Monitoring spaces with KUKA.SafeOperation. The focus is on safety. The software package provides up to 16 monitoring spaces and a fixed cell area for safe reduction of the theoretical workspace – the definition of these monitoring spaces determines the response of the robot.

Each area can be defined individually. Choose between Cartesian and axis-specific definition. A further distinction is made between these types of space:
- Workspace
- Protected space
- Alarm workspace (non-stopping)
- Alarm protected space (non-stopping)
- Cell area (non-switchable)

KUKA.RoboTeam. Turns robots into real team players.

With the KUKA RoboTeam software, up to four robots can work together. Geometric coupling guarantees a significantly shorter cycle time.

Synchronization of robots. KUKA RoboTeam software transfers responsibility for conventional, centralized PLC functions, such as the interlocking of workspaces or program synchronization, directly to the robot group. In this way, all tasks that directly affect the robot group are carried out autonomously by the group.

Geometric coupling of robots. The geometric path and transfer coupling of multiple robots is linked to various different processes. This enables state-of-the-art assembly line production and significantly shorter cycle times. Geometrically coupled robots provide an extremely flexible solution for all handling tasks in which heavy loads need to be transferred and ensure process-optimized positioning even of plant workpieces. This function can also be used for the application of parallel processes alongside the transfer of materials.
Planning reliability and time savings. Realistic simulation for rapid integration.

Our program modules will support you in planning your new systems or optimizing existing ones. They enable you to plan and calculate future production processes with a high degree of reliability.
KUKA.Sim. Smart simulation software for efficient offline programming of KUKA robots.

With KUKA Sim, you can optimize the operation of your systems and robots outside the production environment – quickly and easily.

- **Time savings**
  Plan your system and robot concepts quickly, easily and individually – without actually having to build them in the real world.

- **Increased sales**
  KUKA.Sim helps your sales team to professionally present your solutions to end customers and to increase your sales success.

- **Planning reliability**
  Design system concepts in advance with very accurate cycle times for increased planning reliability and competitiveness.

- **Verifiability**
  The reachability check and collision detection features allow you to test the viability of your robot programs and cell layouts.

- **Modular**
  KUKA.Sim can be expanded in accordance with the modular principle using add-ons for advanced modeling, virtual commissioning or ARC welding.

More productivity, safety and competitiveness. The future-oriented KUKA Sim software brings robot applications virtually to life – before the system has even been put into operation. The robot motion sequences programmed offline are depicted in real time and analyzed and optimized with regard to their cycle times. With features such as a reachability check and collision detection, you can make sure that robot programs and work cell layouts can really be implemented. Digital simulation thus offers maximum planning reliability for your manufacturing processes at minimum cost and effort. At the same time, production downtimes are kept as short as possible.

From offline programming to virtual commissioning. KUKA.Sim creates a digital twin and thus an identical image of the subsequent production process. The 3D simulation covers the entire planning process: from the design of the process to the PLC code. The data are 100 percent consistent, which means that the virtual controller and the real controller work with exactly the same data. In this way, KUKA.Sim creates the basis for virtual commissioning, so that new production lines can already be tested and optimized in advance.
Overview: the most important functions of KUKA.Sim

- **Analysis**: Analyze reaches and identify collision hazards.
- **Forecast**: Measure and optimize the cycle times of your overall system.
- **Modeling**: Generate virtual models of your system. Use a large number of interfaces and exchange formats as well as the extensive library for this purpose.
- **Offline programming**: Access the original robot data. Already teach motions of the robots in the virtual space. Use all options that are also available in the subsequent robot controller. Seamlessly import your data into the controller of the live environment.
- **Safety**: Configure cells and safety zones using the SafeOperation editor and export the results for the practical application without loss.

Add-ons for KUKA.Sim. Our demand-optimized add-ons make KUKA.Sim even more powerful:

- **KUKA.Sim Modeling AddOn**: expands the standard modeling functions of KUKA.Sim. This makes it possible to create individual component libraries from your own CAD data. This naturally also includes the kinematic system, the sensors, the material flow and the physical behavior of the components.

The KUKA.Sim Connectivity AddOn helps you expand the interfaces to include behavior emulators such as WinMOD or SIMIT. This allows you to analyze PLC communication more reliably and predict the feasibility of your planned work cell with even greater certainty.

With the KUKA.Sim ARCWelding AddOn, you expand the interfaces to include behavior emulators such as WinMOD or SIMIT. This allows you to analyze PLC communication more reliably and predict the feasibility of your planned work cell with even greater certainty.

The KUKA.Sim ARCWelding AddOn offers additional functions for welding applications — such as a path generation tool — and thus enables the reliable simulation of even such complex processes.

KUKA.OfficeLite. Virtual programming system for seamless transition to automation practice.

The software uses the original KUKA SmartHMI and KRL syntax, so offline operation and programming correspond exactly to those of the robot.

**The programming system has the same characteristics as the KUKA System Software:**

- Each KUKA System Software release is available in full with all of the functions (a hardware periphery connection is not possible)
- KRL syntax check by the compiler and interpreter provided
- Executable KRL application programs can be created
- Sequence control of robot application programs in real time: improved cycle times

**Use of KUKA.OfficeLite**: KUKA.OfficeLite is the virtual KUKA robot controller and primarily intended for offline programming and application development. It can, however, also be used in conjunction with: KUKA robot training, application development, KUKA.WorkVisual 6.0 or higher.

- **Immediate productivity**: The KRL programs that are created can be transferred one-to-one to the KUKA robot controller and ensure immediate productivity.
- **Independent and flexible thanks to the virtual machine**: The installation is thus independent of the host system and its operating system. Different versions of KUKA.OfficeLite can be installed at the same time and are therefore flexible in terms of their application.

The KUKA.Sim simulation software is powerful and intuitive at the same time. If you nevertheless do not wish to simulate your processes yourself, we will be happy to support you. Our experts determine, risk-free in a virtual environment, which solution concepts are most suitable for your application. From consulting on error and feasibility analyses through to the concrete planning and implementation of your production processes, we work together to ensure that your vision is implemented successfully. On request, our application engineers take over complete tasks or support your team in various phases of the project. These include, for example:

- Creation of a simulation cell with KUKA.Sim
- Preparation of CAD data for simulation
- Accessibility investigation of the robot
- Collision analysis of the robot cell
- Offline programming of KUKA industrial robots
- Cycle time analysis of the robot motions
- Load data analysis of the tool used (e.g. the gripper)
- Implementation of individual workshops
- Digital KUKA.Sim training courses with Microsoft Teams

All of these services are available to you worldwide.
Open, flexible, powerful and intuitive. KUKA operating systems for the reliable implementation of your application.

The linchpins of the entire control system for KUKA industrial robots are the operating systems KUKA SystemSoftware, KUKA Sunrise OS and the new KUKA iiQKA OS.
**KUKA.SystemSoftware.**

**Established, flexible and safe: the open operating system for the entire robot control system.**

The KUKA SystemSoftware – KSS for short – is the operating system and thus the heart of the entire robot controller for the majority of the KUKA robot portfolio – including traditional 5- and 6-axis robots, as well as the new SCARA and DELTA robots.

**Open & flexible**

As the only system software from a major robot manufacturer that is based on Windows 10, KSS offers a number of unique advantages. There are no limits to your imagination when it comes to using KUKA robots and the connected peripheral equipment. Whatever it is, KSS makes it possible, with unrivaled access to modification and adaptation for your solution within a familiar and convenient platform.

**Secure & protected**

In today’s world, where productivity and competitiveness are heavily dependent on networked hardware and software, it has never been more important to ensure a stable and protected system. Safety and security at the highest level – KUKA is synonymous with safety and security. For us, there is no middle ground on this issue, which is why we place it at the foundation of every KUKA SystemSoftware development.

**Get it done faster**

With industry-leading connectivity options based on an open and flexible platform, the “functional twins” KSS 8.6 and 8.7 provide a solid foundation for getting your work done faster – and we have incorporated additional user-friendly functions to reduce commissioning and integration times.

**Designed for any application.**

The “functional twins” KSS 8.6 and 8.7 offer new functions without changing the existing programming environment and user interface – if you are familiar with KUKA SystemSoftware and KRL, you will immediately feel at home. And thanks to the expertise that we have built up over decades, combined with feedback from our customers, the current KSS versions 8.6 and 8.7 are the result of internal and external feedback. In combination with assistance from inline forms, project-based engineering and project-independent online programming, it is clear that KUKA has listened to the suggestions and wishes of users during the development of KSS.

**KSS enables you to implement an extensive range of robot-based applications.** KSS helps you to achieve your goals faster and more efficiently, whether you are planning, installing, commissioning, operating or maintaining a robot-based system. It is subjected to continuous further development by KUKA as an open, flexible and secure platform to meet the high demands in the robotics environment.

**Flexible configuration of additional drives and/or customer kinematic systems.** Operation of asynchronous, infinite rotary or force-controlled external axes and master-slave drives in a group.

**Backup/restore.** Server-triggered, project-based backups of the system configuration and installed options through the integrated backup manager.

**Connection to iQoo pre-installed.** With the pre-installed KUKA DeviceConnector, KUKA systems are quickly integrated and connected to iQoo – the Industry 4.0 solution from KUKA.

**Optional functions**

- **Safe robot.** Extended safe monitoring of the robot and assurance of system safety with KUKA SafeOperation, KUKA.SafeRangeMonitoring or KUKA.SafeSingleBrake.
- **Cooperating robots.** Both in terms of shared workspaces and in the form of load sharing between multiple robots in teams of up to 6 robots using KUKA.RoboTeam.
- **Data exchange.** TCP/IP data communication (binary/xml) to external systems with KUKA.EthernetKRL.
- **Sensor applications.** Real-time capable sensor connection/communication through KUKA.RobotSensorInterface or KUKA.ForceTorqueControl.
- **IT security.** Protection of the controller against malware through the KUKA.Ikarus antivirus solution or the KUKA.CPC whitelisting procedure.
- **Conveyor.** Synchronization of robot motion with the motion of components/conveyor systems using KUKA.ConveyorTech.
- **Safe communication.** Available as a discrete dual-channel technology interface or as safe field bus communication via Ethernet-based protocols to the safety PLC (PROFIsafe via KUKA.Profinet M/S, CIP-Safety via KUKA.Ethernet/IP for FSeI via EtherCAT master-master gateway).
- **User login.** Additional login methods – enabled by KUKA.Userkey.
- **Expansion of the basic functionality.** Integrated deterministic Soft PLC with the advantages of access to the I/O system and the existing system through KUKA.ProConOS.
- **Customer-defined technology modules.** KUKA integrators and end customers can expand the library of available KUKA offline forms and status keys according to customer requirements by using KUKA.UserTech technology. In inter-action with the KUKA.OptionPackageEditor, these modules can be quickly and easily integrated into a KUKA system. Other possible modules are represented by preconfigurations (including dependency mapping) of KUKA technology packages – such as a KUKA.HMI solution, a KUKA.GripperSpotTech configuration or a KUKA.RobotSensorinterface context.

**Customer-specific interfaces.** With the KUKA.HMI product family, we provide the capability of entering the domain of customer-specific user interfaces at two different levels of complexity. For simple applications – KUKA.HMI Easy – and for the demanding user – KUKA.HMIZen.

**Vision – in 2D and 3D.** KUKA.VisionTech offers tools for 2D object recognition, quality recognition, and code and optical character recognition (OCR). KUKA.PerceptionTech enables the perception of the environment in 3D. Customers can implement any of the 3D vision applications from Roboception.

**Engineering functions**

- **Soft PLC interface.** Integrated interface in KUKA.WorkVisual to KUKAMultiplicity – the Soft PLC engineering environment of KUKA.ProConOS.
- **Load data determination.** Determination of the load parameters of real tool attachments by means of pendulum motions using the KUKA.LoadDataDetermination option.
- **Simulation.** Installation and evaluation of complete robotic cells using KUKA.Sim.
- **Virtual robot controller.** Virtualized version of KUKA.SystemSoftware KSS available as KUKA.OfficeLite.
- **Customer-specific technology packages.** Creation of your own customer-specific software packages using KUKA.OptionPackageEditor. Further modules are provided here by the add-ons technologies KUKA.UserTech and KUKA.HMI Easy.
- **Recovery.** Image-based backup solutions through KUKA.Recovery.
KUKA iiQKA.OS. The new system software for intuitive work and maximum performance.

The powerful and intuitive new operating system from KUKA, iiQKA.OS, is KUKA’s future-proof robot operating system, making the implementation of robot-based automation faster, more efficient and more accessible than ever before.

With the new KUKA operating system, iiQKA OS, KUKA ensures that both experts and robotics newcomers will boost their automation goals. iiQKA OS is reliable and easy to work with — delivering a fast start into robotics for beginners and a distinct improvement of the automation process for the experienced. To achieve this kind of power, flexibility and usability, the new OS is built on a modern and modular software architecture that increases the overall efficiency and speed of development, so that new functionalities or components can be installed as fast as possible and customers can respond to market demands quickly.

This new architecture also enables the rapid delivery of updates and upgrades, so that more and more functionality will be added to our new robot OS over time – regularly scaling customer possibilities by offering a variety of smart solutions to its users.

Designed for users by users. The core value of iiQKA OS is its easy comprehensibility, reliable performance and intuitive operation across the complete customer journey. For this very reason, KUKA reviews the total system in every state of development in close cooperation with users. To constantly learn from their experiences, KUKA has implemented a refined and well-structured feedback system. With this valuable know-how, KUKA is able to adapt robot software, hardware and services even better to the needs of its users, ensuring that iiQKA OS together with the iiQKA Ecosystem provide the best possible robotics user experience. When combined with fast and regular updates to functionality, customers can always be assured of having access to the latest features and improvements.

Easy access to the world of automation for experts and non-experts alike. Drawing on its almost 50 years of deep robotics and automation know-how, KUKA once more proves its mastery in the design of flexible and future-oriented automation solutions with the iiQKA ecosystem automation community. Based on the open interfaces in iiQKA OS, it gives everyone, experts and robotics newcomers alike, access to the world of automation. To provide the most comprehensive experience possible at all times, KUKA iiQKA will be regularly updated in short release cycles, especially in the scaling phase at the beginning. Users will benefit in stages from increasing functionality and services that allow simple operation, intuitive handling and safe operation of automated hardware.

iiQKA Ecosystem. A powerful network for the challenges of tomorrow.

Extending the possibilities of robot-based automation, KUKA is teaming up with partners to expand the iiQKA Ecosystem step by step. Together, we are making smart applications, enhanced functionality and digital services available that will be the core of value to everyone with a need for robotics. The iiQKA Ecosystem grants its users convenient, intuitive and reliable access to both KUKA and third-party solutions.

The perfect environment for future-proof industrial automation. Since the beginning of this millennium, digital ecosystems have improved technology usability and access for everyone. Built on software and hardware platforms, these powerful partnerships of industry players make incredibly complex things easy to accomplish, allowing all participants to react faster to demands. Inspired by the natural ecosystem, they bring simplification to a completely new level, delivering an intuitive and user-friendly experience. They already reshaped the world of mobile devices. Now, KUKA brings its own digital ecosystem to the field of robotics – to make automation quicker, easier and more intuitive for everyone.

Easy, intuitive, reliable: the iiQKA Ecosystem. With iiQKA, our almost 50 years of expertise in automation, robotics and global collaborations are intuitively distilled and delivered digitally. Built on the iiQKA OS platform and delivered via KUKA’s my.KUKA customer portal, the iiQKA Ecosystem is the key to making automation easier and opening it up to many more potential users. But the true power of the iiQKA Ecosystem comes from the content inside it: from easy-to-use and implement components such as grippers, safety sensors and vision systems, to software for automation solutions. Thus, the iiQKA Ecosystem allows for intelligent industrial automation in a reliable environment.
KUKA Sunrise.OS.
The operating system for graphical programming of sophisticated robot applications.

KUKA Sunrise.OS is the current operating system software for the KUKA LBR iiwa and other KUKA Mobility products. Together with KUKA Sunrise.Workbench, KUKA Sunrise.OS offers all the functions needed for programming and configuring sophisticated robot applications.

Graphical programming with KUKA Sunrise.OS

The approach to programming with Sunrise.OS: the Application Framework provides an editor that assists you in modeling the robot’s work sequences graphically. Using the KUKA smartPAD, it is also possible to check the individual work steps that you modeled previously and, if necessary, intervene manually at any time. The fact that the JAVA program code is displayed in so-called blocks means that planners are also able to generate processes without programming knowledge. At the same time, it is possible to switch back to expert mode and use the full power of JAVA.

Other advantages of graphical programming

- **Structured.** The process diagram automatically illustrates the sequence in a structured manner due to its form. So-called wizards provide assistance during planning.
- **Consistent.** The block diagram can be used throughout the entire design process (planning, programming, planning, maintenance).
- **Reusable.** Each block can be used again in other applications and expanded as desired.
- **Efficient.** Many steps are transferred to the offline design process and expedited as a result. That saves time and cuts costs.
- **Scalable.** The blocks can be used in a hierarchical manner and also merged into a group.

KUKA Sunrise.Workbench engineering suite

- Ergonomic user interface
- Program editor with many powerful user-friendly functions
- Object-oriented programming with JAVA
- Fast start-up
- User-friendly diagnostics
- Integrated user manual
- Professional debugging
Cloud-based services

Wherever you are. Keep an eye on your robot systems.

Cloud-based software is one of the cornerstones of Industrie 4.0. Cloud-based services from KUKA digitalize and optimize your production.
KUKA iiQoT. Data-based automation made easy.

Data-based added value through IIoT for your robots. Maximize the operating time of your robot fleet with KUKA iiQoT. The central IIoT (Industrial Internet of Things) platform supplies all important data in real time. This makes not only remote monitoring of the robot systems more efficient, but troubleshooting as well.

One platform for all robots: monitoring, visualization and troubleshooting. What condition is your robot in? How efficiently is it working? And what about the entire robot fleet at your company? KUKA iiQoT has an eye on all the condition data: from hardware to software and on to the controller. The central platform leverages the advantages of the Industrial Internet of Things and bundles the data of a complete robot fleet transparently and clearly in one dashboard. You can gain access from anywhere around the clock. The most important functions include systems management, preventive maintenance, fault detection as well as warning messages. Instead of simply visualizing raw data, KUKA iiQoT delivers supplementary orientation parameters, enabling messages to be easily interpreted and faults efficiently rectified. The IIoT platform, implemented by KUKA subsidiary Device Insight, is suitable for small and large fleets – and paves the way for the smart factory.

IIoT: easy to use, for any industrial requirement. KUKA iiQoT is characterized by an expandable software ARChitecture. iiQoT is modular in structure, which allows us to respond flexibly to a wide range of customer requirements. This makes it easy to find your way around and provides you with valuable functions depending on your industrial application requirements.

Avoiding production downtime thanks to IIoT application The IIoT software from KUKA is strongly oriented towards the needs of companies: minimizing downtime and maximizing operating time. This is achieved through the optimal interaction of various modules, such as “Condition Monitoring”, “Fault Diagnosis” and “Changelog”. It is thus possible to identify and respond to faults quickly. KUKA iiQoT users can log into the corresponding robot in the selected line and cell in order to view the problem. If troubleshooting does not succeed in the first step, you can quickly access diagnostic data via “Fault Diagnosis”.

A digital knowledge database covering all KUKA products, accessible from anywhere at any time. KUKA Xpert provides comprehensive technical information especially for service technicians, planners, programmers, operators and start-up technicians. Instructions and documentation for all KUKA products always at hand. With our digital knowledge database for technically relevant information and documentation about all KUKA products. Independently solve problems as they arise and save valuable time.

Manuals, product instructions and more: what content does KUKA Xpert offer? KUKA Xpert offers you bundled and digitalized know-how about KUKA products in a web-based application. In addition to the paid version KUKA Xpert, the free version KUKA Xpert Basic is also available for our customers, containing all the required documents and information for your KUKA products.

Optimization of the fleet
• Management of systems and machines
• Checking safety
• Robot maintenance

Fault finding and troubleshooting
• Notification of problems
• Saving time during fault finding
• Increasing availability

Clear and quick overview
• Transparency across the entire robot fleet due to IIoT technologies
• Remote monitoring outside the production halls
• Access to all required data from all devices

Increased efficiency
• Safeguarding system productivity
• Identifying potential for improvement in the industrial environment
• Targeted actions

Global Customer Services

We create success. Together. Worldwide.

German engineering, quality, creativity and a tireless commitment to our users: at KUKA, this has been the basis for decades of exceptional technologies that have helped our customers gain a decisive competitive advantage. We were the pioneers in the world of robotics. Today, we are a global leader in innovation. Our passion is to create future-oriented solutions that make even complex automation tasks easy.
KUKA Global Customer Services.
For perfect customer service.

With our global network and by using the latest means of communication, we can offer our customers the outstanding service of a global market leader.

Speed, reliability and professionalism are essential in guaranteeing efficient production processes – throughout the entire life cycle of your automation solution.

For this reason, we take an open-minded approach to your specific and individual requirements. In addition to our experience from everyday operations and findings from research and development, feedback from our customers also helps us to deliver the best service possible.

“Service quality plays a decisive role in efficient production sequences – over the entire life cycle of the product. This is why KUKA has made Global Customer Services a main discipline. With the best range of services that you will find around the world.”

Gerhard Müller
Senior Vice President
Global Customer Services

Find the right contact person – we will be happy to help you:
www.KUKA.com/customer-service

Always there for you worldwide:
- Qualified and excellently trained service technicians & programmers
- Certified and standardized Colleges
- Global infrastructure and regional hubs for rapid spare parts supply
- 24/7 professional support

Over 1,400 employees in Customer Service

1,000 different parts in stock
deliveries per week

More than 350,000 industrial robots on the market

46 College sites
with more than 19,000 participants

70 subsidiaries worldwide
in 4 regions

8,000 different parts in stock
Our business does not end with the sale of a robot. We offer a wide range of services for the robot, stretching from the decision phase for automation to training, programming, maintenance and refurbishment of used machines.

All products offered by Customer Service were designed with one goal in mind: maximizing your success. And we bring our passion and enthusiasm to this endeavor.

We are always there for you – whether you need technical assistance or advice on the optimal maintenance philosophy or production optimization.

**Hotline**

The KUKA Hotline provides expert assistance for technical challenges regarding the robot. A globally standardized ticket system enables seamless collaboration, no matter where the robot is located. Use my.KUKA.com in conjunction with the KUKA Hotline for an even faster response time and greater transparency.

**Consulting**

Our Customer Service consultants will advise you individually on site and deliver customized solutions that meet your exact requirements. With the right answers regarding spare parts, maintenance, programming & optimization as well as retrofits, the consultants ensure your success.

**Self-Service with my.KUKA**

My.KUKA.com is a powerful self-service platform. Registering your robot fleet gives you access to tailored product documentation and the Xpert database for fault analysis including valuable work instructions. Beyond this, my.KUKA links your robot fleet to the KUKA marketplace – thus making the search for the right spare parts or available services a breeze.

---

**About KUKA**

KUKA Global Customer Service. To maximize your success.
A timely upgrade or refurbishment ensures the sustainable use of robotic automation. Depending on your operating parameters and requirements, experts from KUKA renew your system – from selective upgrades to renewal of the entire robot system. This assures a second life cycle of your investment.

Availability, performance and quality are the key factors in successful production. Our preventive maintenance and flexible service levels – along with a guaranteed supply of spare parts – assure high availability of your robot. Qualified performance checks by KUKA experts additionally identify optimization potential in terms of performance and quality.

The optimal choice of the robot type and the implemented technologies lays the foundation for successful robot automation. Simulation, feasibility studies and test setups by our KUKA technology experts reduce risks and guarantee minimum planning times.

In the Setup & Program phase, KUKA technicians undertake the programming work, develop intelligent application solutions and ensure smooth installation of the robots. We do everything to make sure that every start of production is successful and that the quality is right.
Good planning. Fast, safe and successful implementation

KUKA supports you with four important modules to ensure that your project idea and requirements can be turned into a complete implementation concept with minimum effort and cost.

KUKA Technology Packages.
The right robot and the right technology.

KUKA experts advise you on the selection of the most suitable robot as well as the appropriate technologies and components for your application.

KUKA Application Center.
Tests and feasibility studies.

With comprehensive test setups and feasibility studies – whether for welding, image processing or other applications – we ensure the correct design of the components and are able to test critical areas of your application. This provides reliable results even before the actual project is launched, thus minimizing planning risks.

KUKA Safety Services.
Considering safety right from the planning phase.

From conventional safety concepts to human-robot collaboration – we are happy to advise and support you, for safe implementation in accordance with current safety standards.

KUKA.Sim.
Efficient planning through simulation.

Well-grounded simulation of the robot cell minimizes risks in terms of accessibility and cell layout. Beyond this, the cycle time can be determined and already optimized offline. This guarantees a rapid, efficient planning phase and lays the foundation for a successful project.

Added value for you
• Use KUKA robots and technologies correctly and get the most out of them
• Reduce project costs and risks through professional support and analysis
• Effective safety concepts and minimized cell sizes

Plan & Select

Product portfolio, Global Customer Services 172_173
KUKA College. The easiest and most modern way to work with robots.

KUKA leaves nothing to chance in this area and offers state-of-the-art methods for the training and development of your employees.

Your company benefits from your employees’ capability to
• successfully implement the project through correct planning and assessment of risks.
• ensure targeted programming and implementation.
• increase productivity and safety in your system.
• respond quickly and efficiently to production changes.

KUKA College supports your employees from beginners to experts with an intelligent combination of digital media and practical in-person training – a powerful learning platform that can be expanded with customized training as needed.

In-person training at KUKA College
50:50 theory/practice combine with online modules

Certified trainers
Highly qualified and evaluated

On-site training sessions
We come to you, anywhere & anytime

Online
E-learning modules and interactive online webinars from the comfort of your own home

Added value for you
• Globally certified standards for the training process & trainers
• State-of-the-art infrastructure
• Trainers with practical experience
• 50% practical content

Target groups and course offering. To ensure learning success, the KUKA course offering is geared to the respective target groups.

Operator. Can operate the equipment, make program adjustments and resolve problem situations

Programmer. Creates the robot programming and the entire application program

Start-up technician. Configures the safety and interfaces to PLC and peripherals

Course offering. Operator course, Operator Pro

Course offering. Programming 1 and 2

Course offering. SafeOperation, Profinet Configuration

Maintenance technician. Analyzes malfunctions and rectifies electrical or mechanical problems

Planner/Designer. Plans, simulates and ensures the correct design of the robot

Course offering. Mechanical Servicing, Electrical Servicing

Course offering. KUKA Sim, Robot Selection and Integration, Cell Safety

Manager. Decides on the application of robots with regard to safety, ROI and technology

Course offering. Training for managers, individual points of emphasis

Modern training environment
Certified Colleges – worldwide

Custom-tailored workshops
Training modules tailored exactly to your individual requirements

Digital Learner Platform
Digital support through videos, tutorials and self-study modules throughout professional life

Xpert
Knowledge base – Expertise on demand

The modular and flexible course structure precisely targets the needs of the respective user. Modern e-learning modules and webinars complement the practical seminars at KUKA College. The following example shows how you can leverage this to become a programming expert.

The easiest and most modern way to work with robots.

Beginner

Get an overview

Establish basic knowledge

Learn how to work with the robot

Gain in-depth knowledge of specific topics

Expand your programming skills

Become an expert

Webinar
Fundamentals of robotics, as a live online event

E-learning module
Basic knowledge of robot cell, PLC, field bus

Programming 1
Move and program robots

E-learning module
“Mastering” or “Loads on the Robot”

Programming 2
Optimise motions, integrate sensors

E-learning module
Optimise cycle times

For complete range of courses, see www.college.KUKA.com

KUKA programming support.
Your choice for fast and efficient robot programming.

Highly qualified and dedicated staff will support you throughout the entire programming and start-up phase. Whether it is just a matter of minor program changes or the application implementation of a complete robot cell: the KUKA engineering team is the right partner for your project – in practically every technical discipline.

**Added value for you**
- Experienced programmers guarantee fast and competent implementation of the application.
- We know how to apply our technology packages. This enables us to reduce unnecessary project risks.
- Comprehensive offline preparation of the application ensures the shortest possible start-up times on the real system.

Choose the appropriate programming support to match your project-specific circumstances.

**Comprehensive**
- Complete cell and robot programming
  - From the first simulation to the ramp-up phase and acceptance – the complete handover for your automation project.

**Flexible**
- Programming support via support quotas
  - Support your robot programming through flexible quotas.

**Individual**
- Hand-in-hand programming support
  - Execution of specific project phases of your automation.

Installation and configuration.
Professional, precise installation and start-up support.

We install and assemble your equipment. Through error-free initial start-up and installation, we ensure correct operating parameters of the robot components. This increases durability, avoids unwanted problems when replacing components and reduces maintenance costs.

- **Our scope of services**
  - Initial robot start-up and configuration
    - Correct configuration of the load cases, robot check
    - Load data determination, correct adjustment of the energy supply system
    - Robot and KL assembly
    - Precise installation according to specifications
    - Acceptance report

- **Added value for you**
  - Less wear and longer service life of your equipment
  - No reteaching after maintenance and repair
  - Correct configuration and function right from the start

KUKA.AppTech.
Reach your goal faster with established standards.

Our option package provides the common thread in application programming with defined interfaces, ready-made program structures and modules.

**KUKA.AppTech includes**
- Proven station and component program templates
- A comprehensive library of customizable and expandable function blocks
- PLC function and data blocks for seamless, optimized PLC programming for common PLC manufacturers

With KUKA.AppTech as the company standard, you save valuable time since the program logic and operator control concept are always identical.

Choose the appropriate programming support to match your project-specific circumstances.

- Usual programming with KRL
  - Time and cost savings during start-up on site
  - Modification
  - Optimization
  - Start-up
  - Preparation
Customized concepts for every maintenance philosophy.

We are driven by the will to actively maximize our customers’ productivity. Our highly qualified service personnel is available to you with short response times via remote and on-site support.

Our customized service concepts adapt to your maintenance philosophy and requirements. We proactively support you in maximizing all production parameters.

Added value for you
- Short response times thanks to 24/7 service and KUKA technicians on site
- Preventive maintenance avoids unplanned downtime
- Certified technicians and manufacturer quality ensures a high first-time fix rate
- Leveraging optimization potential through KUKA process and robot specialists

System availability
- Maintenance agreements and service levels
- Extension of warranty
- 24/7 hotline support and availability
- Preventive maintenance management

Production output
- Detailed analysis and performance check
- Cycle time optimization
- Adaptation of cell layout and arrangement
- Improvement of ease of operation

Production quality
- Detailed analysis and performance check
- Process optimization
- Hardware and software upgrade
- Enhancement of process stability

KUKA maintenance agreements and service levels for maximum availability of your system.

Regular preventive maintenance is the cornerstone of high availability for your system. By choosing the appropriate service level, the response time can be reduced to a minimum: in case of unexpected problems, you can reach our technicians 24/7, 365 days a year. For new systems, we also offer the option of a warranty extension to 5 years. This rules out any surprises for you.

All measures pursue one goal: maximum availability of your system.

Added value for you
- Prevention and avoidance of unplanned downtime
- Guaranteed fast start of technician call-out and rapid provision of spare parts 24/7 and 365 days a year
- Plannable costs for maintenance and repairs
- 100% expertise around the globe

Even the tiniest of parts can have a huge impact if they no longer work correctly. So benefit from our KUKA spare parts service:

- Utmost quality thanks to perfect matching to our robots, cells and systems
- Fast and comprehensive spare parts supply via our modern central warehouse in Göttingen
- Creation of individual spare and wearing parts packages
- Exchange, reuse and repair of defective components in our KUKA repair center

The global KUKA hub strategy creates the infrastructure to ensure fast spare parts deliveries around the world. This allows you to minimize downtime.

KUKA Digital Touchpoints. Your digital connection to the world of KUKA.

Create your support requests online and view the processing status. Remain up to date at all times and promptly receive the support you need.

Use the Spare Parts Finder to quickly and easily select and order the spare part you need for your robot.

The KUKA Xpert digital knowledge base provides comprehensive technical information, such as instructions and documentation for your KUKA products.

Register your KUKA products quickly and easily online and receive access to complete product documentation. Manage your KUKA licenses and stay up to date on employee training and development.

The digital product catalog provides you with a comprehensive overview of our service portfolio, spare parts and our digital products. Buy products directly online or submit a quotation request.

Get 24/7 direct access to work instructions as well as to fault diagnosis and troubleshooting options for your KUKA assets.

Challenges in your production
The success of automated production is based on improvement of the relevant operating parameters. Important parameters that need to be optimized on an ongoing basis include:

- Productivity
- Cost-effectiveness
- Connectivity
- Process quality
- User-friendliness
- Availability

In two steps we support you in optimizing your operating parameters.

KUKA Performance Check
Experts from KUKA carry out a comprehensive analysis of your system on site.

KUKA Programming & Engineering
The KUKA team implements the optimization measures defined in the action plan.

- Well-founded analysis of optimization potential by experienced KUKA application engineers
- Uncovering unused potential by identifying downtime or malfunctions
- In-depth process analysis to rectify quality issues
- Identification of potential for optimization in cell layout and step sequence
- Robot programming
- PLC programming
- Upgrade and refurbishment measures
- Process optimization
- Software and plug-in development
- Digital services

Added value for you
- Analysis and identification of optimization potential by experienced KUKA application engineers
- Targeted and fast implementation of measures based on initial analysis
- Highest standard of certification and safety
- Enhancement of
  - process accuracy,
  - reliability and
  - product quality

Further KUKA services for your Operate and Maintain phase

KUKA Backup Services
- Automation and integration of your backup strategy into existing infrastructures
- Storage locations on external drives for centralized ARChive management
- Individual configuration of backup mechanisms

KUKA Safety Checks
- Check of the safe configuration
- Comparison of existing safety spaces with the layout
- Check of the clearances and stopping distances at space boundaries
- Safeguarding of HRC applications including force measurement

Added value for you
- Fast resumption of production in a backup situation
- Continuous alignment with the latest safety standards
- Assurance of the work safety of your automation

Cycle time optimization
Reduction of rejects
Improvement of mechanical stress
Assurance of product quality
Increase of production output
Enhancement of user-friendliness
KUKA Upgrade and Refurbish Services.
Extend the service life of your robot automation.

When systems are in use for a prolonged period, it may be necessary to make adjustments. This is the case, on the one hand, when production conditions have changed. On the other hand, an upgrade also becomes necessary when spare part availability and support options can no longer be guaranteed. If a robot system is then not brought up to date, there is a greater risk of unplanned downtime and maintenance costs. With Upgrade & Refurbishment Services, KUKA ensures the maximum service life of your robot systems.

KUKA Refurbishment Services
KUKA Refurbishment Services make your robot and system fit for their second life cycle. Besides targeted individual measures, KUKA offers attractive refurbishment bundles at your site. Our KUKA experts work with you to determine the necessary scope of the refurbishment project.

The KUKA refurbishment modules

- KUKA Robot Refresh Packages
  Complete overhaul of your robot arm including exchange of all common wearing parts.

- KUKA KSS Upgrades
  Software and PC upgrade for a future-proof robot system

- KUKA CBS
  Service Bundles
  Worry-free exchange concept for counter-balancing systems

KUKA Retrofit Services
Particularly where systems with a long service life are concerned, a detailed look is warranted. Our KUKA engineers are at your side for your retrofit project and work with you to develop a strategy for future-proof automation.

Our range of services for your retrofit project

KUKA Retrofit Check
- Well-founded analysis of the current state on site
- Coordination of customer requirements
- Determination of retrofit measures
- Project preparation

KUKA Retrofit Project
- Mechanical and electrical design
- Simulation and offline programming (robot and PLC)
- Dismantling of the old equipment
- Installation and start-up on site, programming
- Issue of the CE declaration of conformity
- Production support and optimization

Added value for you
- Maximization of the technical availability of your system
- Securing of your competitiveness through the latest technologies and high availabilities
- Maximization of your productivity and reduction of rejects and follow-up costs
- Everything from a single source along with expertise directly from the manufacturer

Used robots and machines: your cost-effective entry into robot automation
In addition to new products, KUKA also offers used industrial robots. These are extensively inspected by us, overhauled if necessary and offered with a warranty on all parts. Whether to rent, loan or purchase, used robots from KUKA offer the opportunity of a particularly cost-effective entry into robot-based automation.

Added value for you
- Customer-specific adaptations possible at any time (e.g. energy supply systems)
- Short delivery times through robots available from stock
- Good condition or top level: through three reliable quality categories (Superior, Premium and Certified)
- Tested quality and warranty on all parts

Please feel free to contact us if you would like to sell your used KUKA robot.
