

KUKA

KUKA Industrial IoT offering
_your way forward to IIoT

KUKA Consulting

Keeping an eye on the big picture

With our Industrial IoT solution, we raise your factory to the next level of productivity and operational excellence.

We offer you a tailored end-to-end IIoT solution featuring a modular framework comprised of proven standard components. These can then be customized and applied to meet your specific requirements. Powered by online analysis of shop-floor data, we quickly deliver significant operational impact.

Overall equipment effectiveness

Boost the performance of your operations to achieve operational excellence as well as to increase equipment lifetime and minimize unscheduled downtime.

Sales & growth

Generate new revenue streams by increasing the flexibility and scalability of your operations. Avoid high investments through new service-based business models.

The KUKA proven toolbox

The KUKA software range optimizes your complete supply chain. Intelligent combination of software tools and machines creates tailored services for your Industrial IoT solution. Our platform offers software tools such as KUKA Connect, KUKA Xpert, KUKA SmartProduction_monitoring, SynQ.

Data-driven improvements for your processes

Learn and analyze your production performance in order to gain precise process insights and thus facilitate data-driven decisions and better allocate your human resources.

Achieve excellence through performance benchmarking

Gain transparency and awareness across your internal operational processes. Compare and improve production sites all over the world.

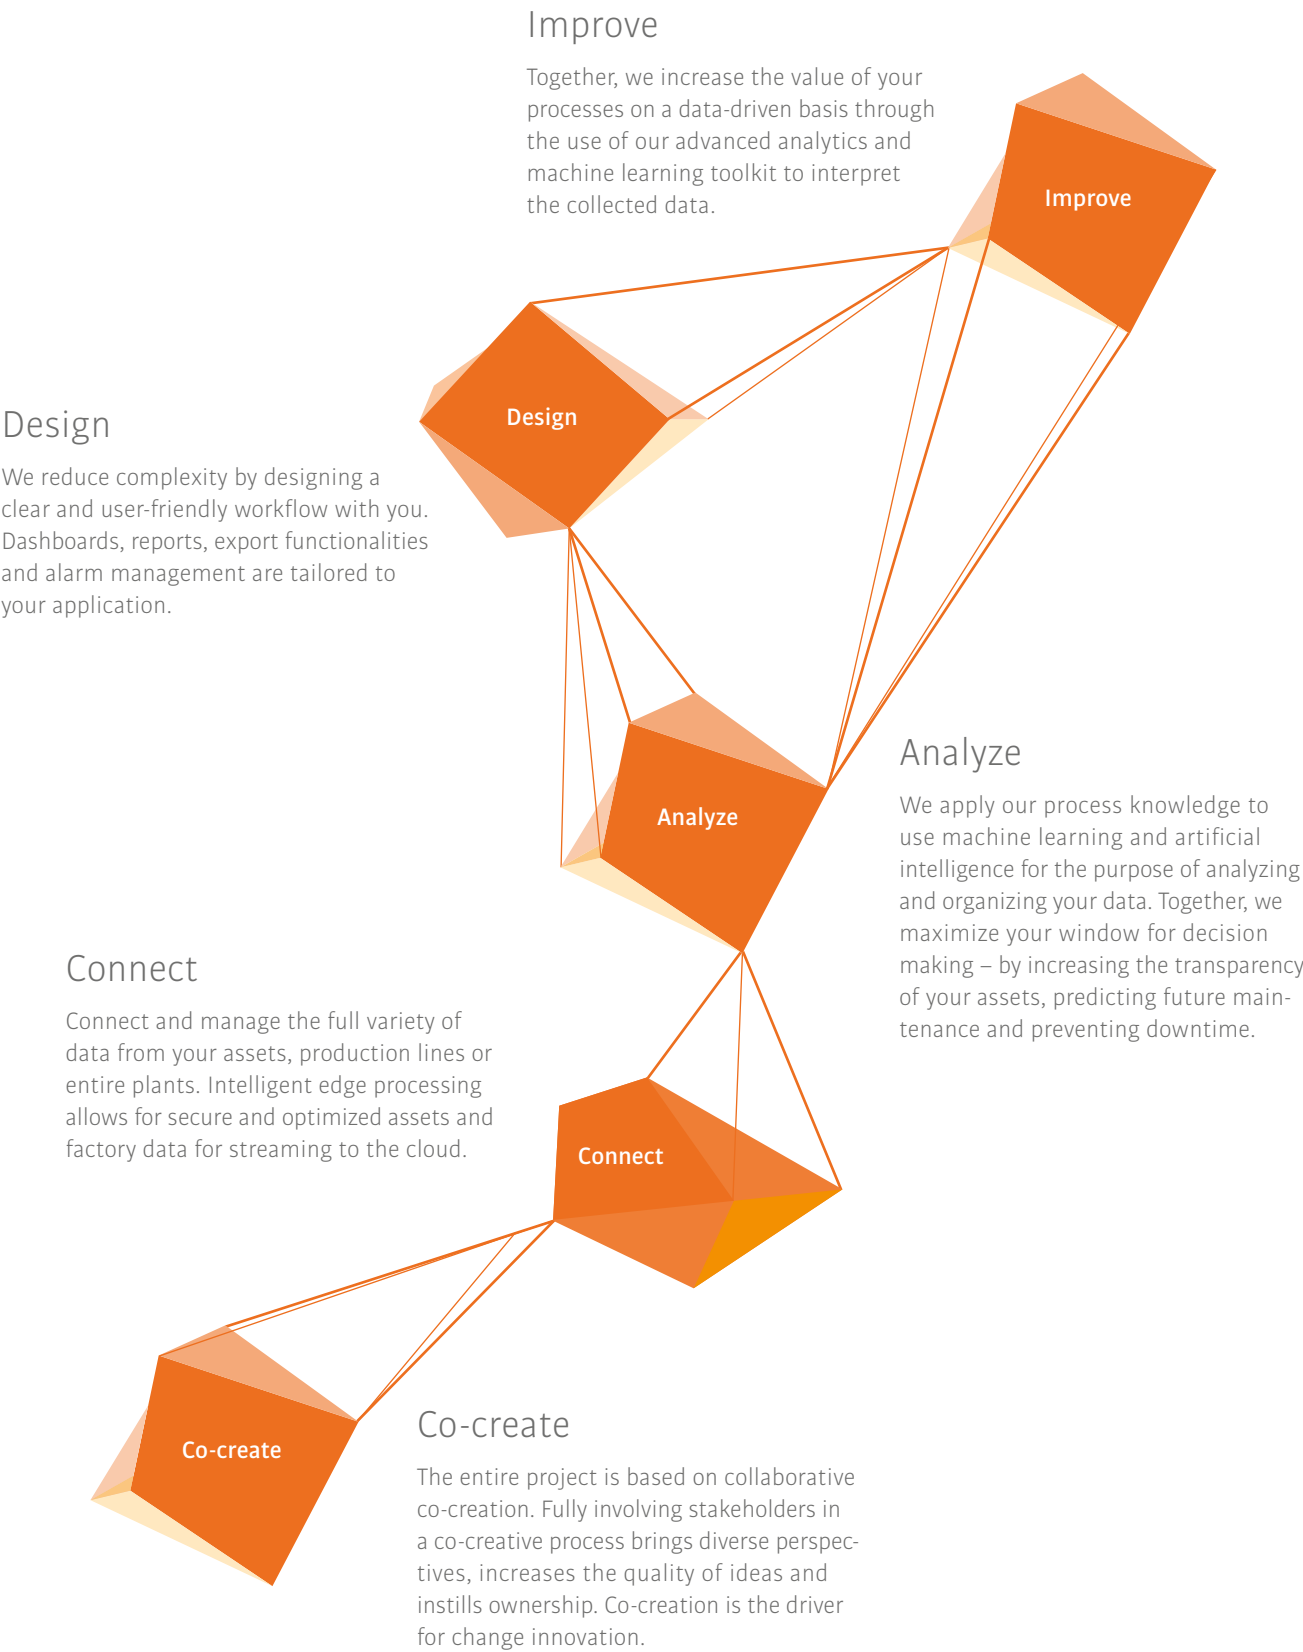

Maximize returns on your IIoT investment

With our IIoT pilot, you can evaluate the usability of the application and the connectivity performance, assess data quality and understand the basis for setting up a business case.

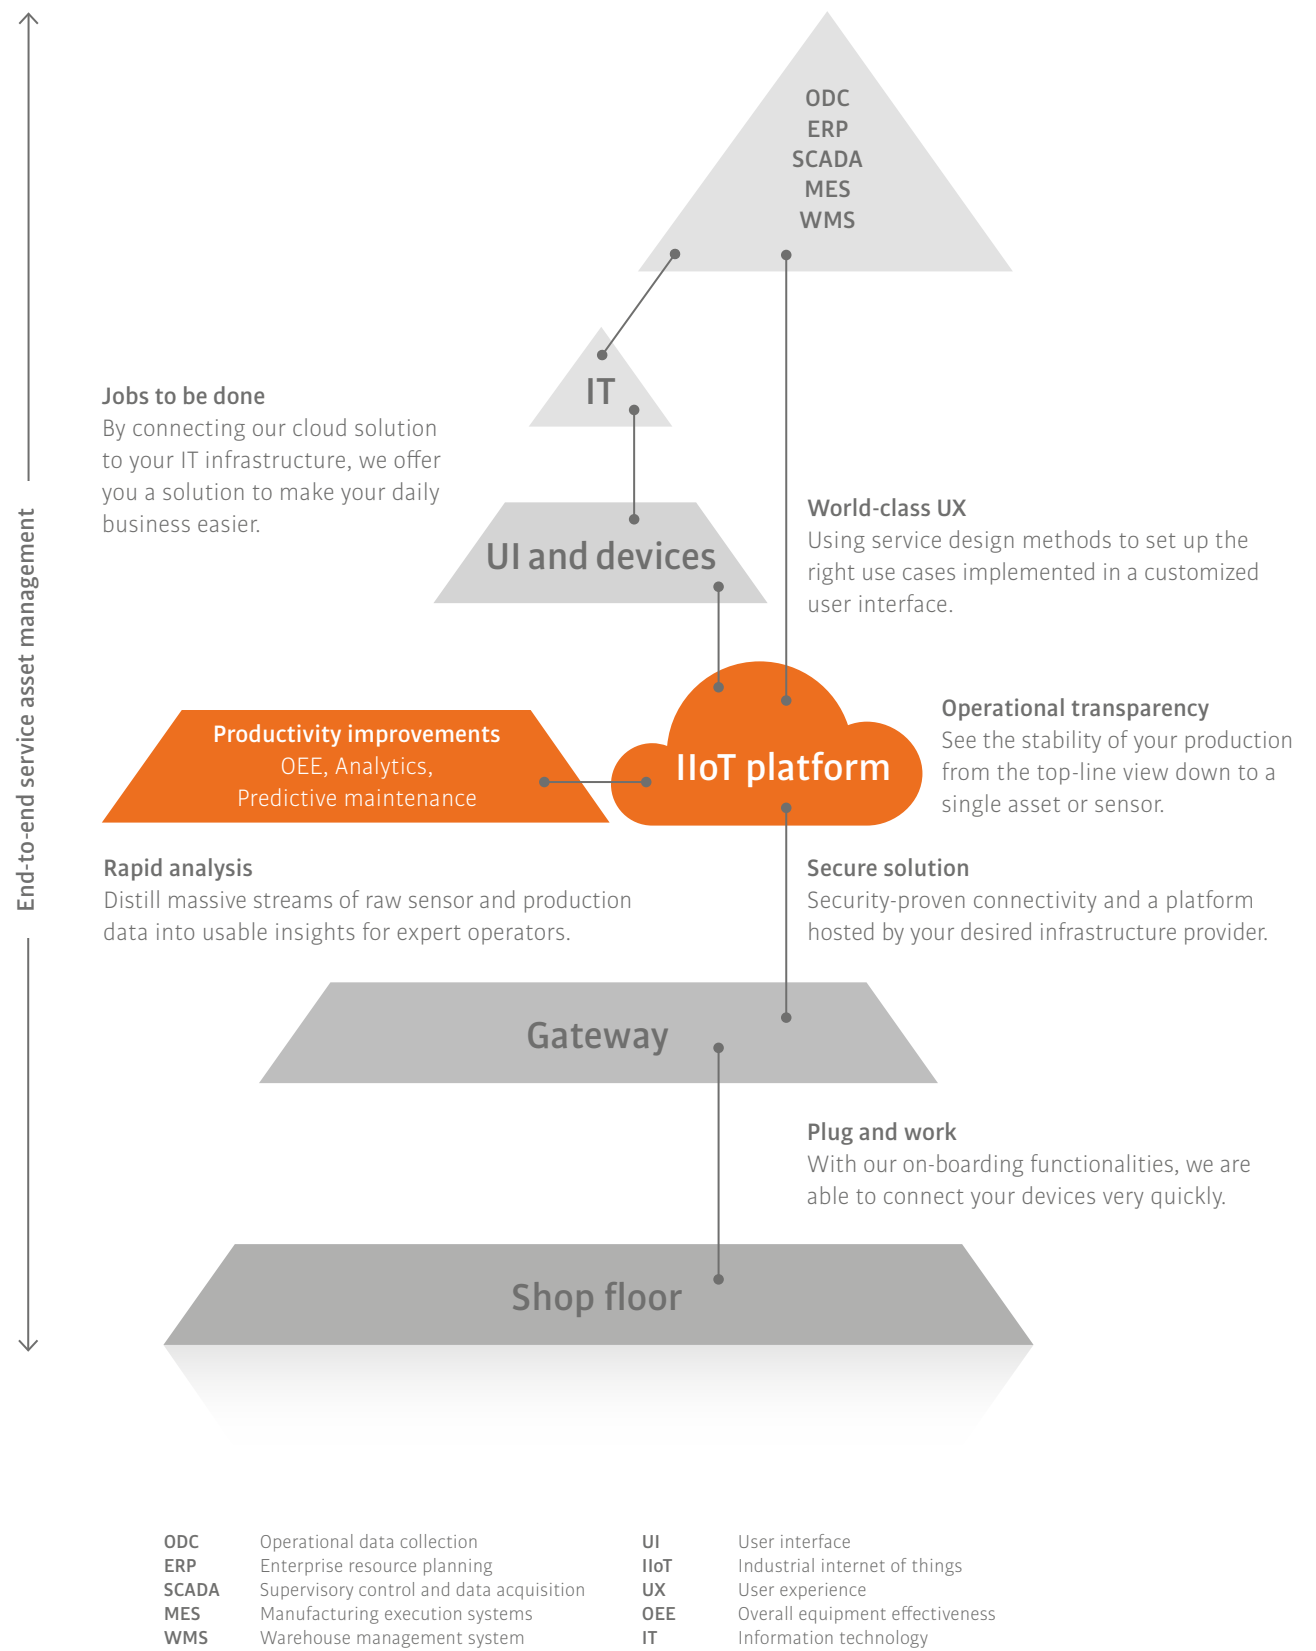

Five steps to measurable results

High five on Industrie 4.0

Continuously from the shop floor to the cloud

Get the ultimate overview – quickly and comprehensively

Fast entry into Industrie 4.0

Pick your individual solution

KUKA IIoT Cell Insights

KUKA IIoT Line Insights

| Stage 1 | Stage 2 | Stage 3 |
|--|--|--|
| Getting started Workshops set | Getting insights Pilots set | Getting improvements Data analysis set |
| 2 DAYS Proof of impact | 3 MONTHS Cell insights | PLUS Productivity improvements |
| 5 DAYS Proof of impact | 6 MONTHS Line insights | PREMIUM Process improvements |
| <p>Following the workshops, it will be clear whether continued investment in I4.0 is appropriate or further preparation and/or resources are required.</p> <p>You will also understand the use case to initially focus on in order to create an impact for your customers and stakeholders, and to obtain a list of features and an application description.</p> | <p>After the set of use cases and connectivity, you will be able to begin the pilot phase.</p> <p>During this phase, you can evaluate the usability of the application and the performance of the connectivity. At the same time, you can assess the data quality, understand the basis for setting up a business case and learn about storage volume and IIoT architecture.</p> | <p>Based on the experiences and the data transparency during execution of the pilot phase, the improvement of the cell or line is the logical next step.</p> <p>The opportunities which are obvious and easy to implement are leveraged in the light version while the full version includes data analytics.</p> |

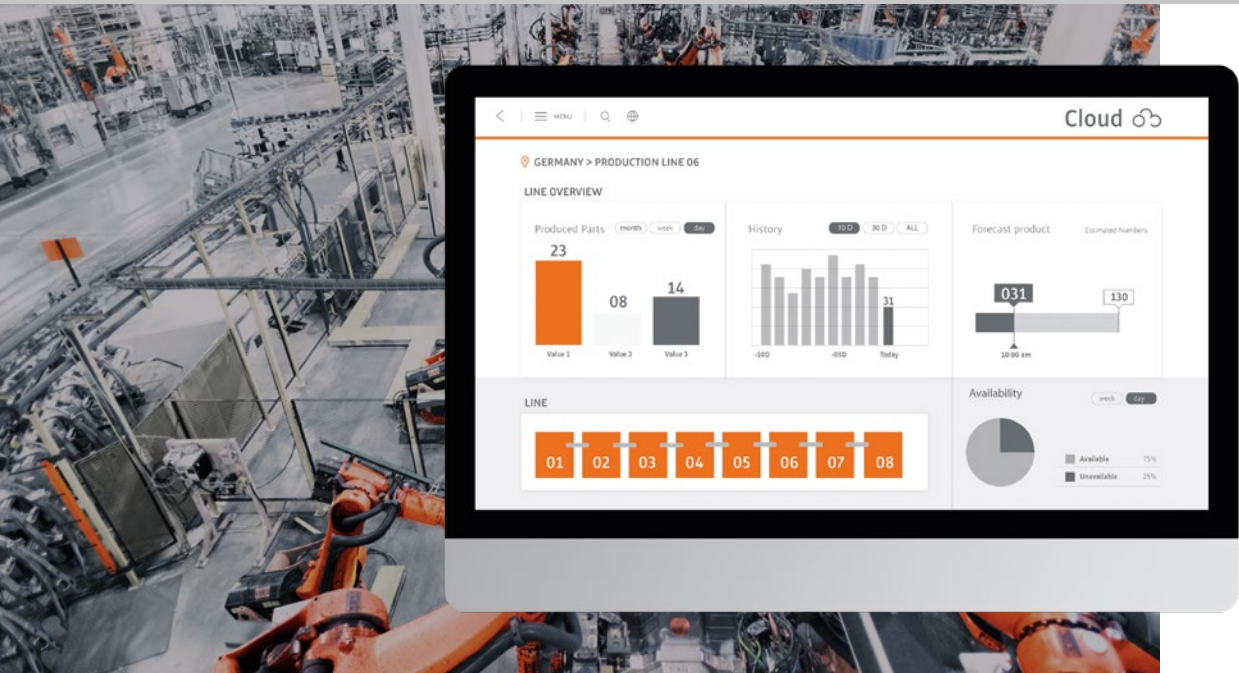

Every detail on the screen

The KUKA offering in details

KUKA IIoT Cell Insights

KUKA IIoT Line Insights

KUKA IIoT Cell Insights

| 2 DAYS Proof of impact | 1 | 3 MONTHS Cell insights | 2 | PLUS Productivity improvements | 3 |
|-------------------------------|---|-----------------------------------|---|--|---|
| Service design workshop | | Connectivity PLC | | IT connectivity concept (edge clients, remote services, etc.) | |
| I4.0 use cases | | Monitoring of asset status | | Scope analytics phase ¹ | |
| UX / UI sketches | | UX concept: wireframes, interface | | • Service design workshop (problems and knowledge scoping) | |
| Requirements definition | | Requirements engineering | | • Programming / reprogramming PLC(s) | |
| Research feedback on distance | | Report functionality | | Predictive maintenance | |
| Software toolset validation | | Detection of potential failure | | Minimization of machine downtime | |

¹ Integrator presence and cooperation is required (approx. 2–3 weeks)

Implement IIoT on a new line

Or upgrade your existing facility

What occurred here
An undetected leak in a pneumatic line causes minor irregularities in clamping of workpieces.

Affected here
The leaking pneumatic line bursts, causing the machine break down completely.

Machine availability
With the anomaly detection of our IIoT solutions, this would never have happened.

Improve your availability.
Enhance process performance.

Comprehensive application set
Our digital application allows you to access data points and data frequency as well as to manage data analytics. Thanks to the live evaluation of data and historical storage you can lower the machine downtime in the individual manufacturing process.

“Quality without results is pointless.
Results without quality is boring.”

Johan Cruyff
(Dutch football coach and manager)
